 CC -1- FUNCTION: Has an oostatic activity. Inhibits trypsin biosynthesis
 in the midgut which indirectly reduces the vitellogenin
 concentration in the hemolymph resulting in inhibition of oocyte
 development.
 CC -1- DEVELOPMENTAL STAGE: Synthesized and released from follicular
 epithelium after a blood meal.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX PS Claim 3; Page 69; 154pp; English.

CC Sequences AAV52510-Y52522 represent proteolytic fragments of

CC Dermatophagoides farinae high molecular weight mite allergen protein (HMW

CC -map) composition. The HMW-map composition was isolated from a D. farinae

CC homogenate by gel filtration, with each fraction being analysed for the

CC presence of proteins that bound to IGE present in mite-allergic dog

CC antisera. The HMW-map composition comprises mapA (a 109 kD protein) and

CC mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids

CC encoding them, may be used in therapeutic compositions to modify an

CC animal's hypersensitivity reaction to mite allergens. Animals that may be

CC treated include mammals and birds, especially felines, canines, equines,

CC humans, other pets, and work or domestic animals. The proteins or

CC fragments may also be used to diagnose allergies via a skin test. The

CC proteins and peptides can also be used to raise antibodies, which have a

CC variety of potential uses. For example, they can be used as vaccines to

CC passively immunise animals against dust mite hypersensitivity, as

CC positive controls in test kits and as tools to recover desired dust mite

CC allergens from a mixture of proteins

PT	New mite allergenic protein isolated from Dermatophagoides, designated Der HMW-map protein, useful as a vaccine for treating mite allergy.
PX	
PS	Claim 12; Page 70; 16pp; English.
XX	
CC	The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non- proteinalcous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitizing a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig) E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention

XX New modified nitrilase polypeptides, useful for preparing carboxylic
PT acids, preferably substituted chiral carboxylic acids.
XX
XX Discloure; Page 13; 96pp; English.
XX
CC The present invention relates to modified nitrilase proteins, which are
CC useful for preparing carboxylic acids, preferably substituted chiral
CC carboxylic acids. Nitrilases are enzymes which catalyse the hydrolysis of
CC nitriles into the corresponding carboxylic acids and ammonium ions. The
CC modified nitrilases of the invention have a modification at position 296
CC and exhibit a modulated acceptance in comparison to wild-type nitrilase.
CC The substitution of tyrosine at position 296 in wild-type Alcaligenes
CC faecalis nitrilase comprising a sequence of 356 amino acids (ADR67405)
CC was realized by site-directed mutagenesis utilizing overlap-extension
CC PCR. The present sequence is a fragment of a nitrilase used in a sequence
CC alignment to illustrate the invention.

PT Selecting target and target binder pairs for preparing a composition for
PT treating cancer by mixing in a reaction vessel phase expressing
PT biological targets and phase expressing target binders.
XX
PS Claim 26; SEQ ID NO 302; 172pp; English.
XX
CC The invention relates to a novel method of selecting target and target
CC binder pairs comprising mixing in a reaction vessel phase expressing
CC biological targets and phase expressing target binders, each having
CC distinguishable selection markers and selecting target and target binder
CC pairs based on the selection markers. The molecules of the invention
CC demonstrate cytostatic activity whilst the method may be useful for
CC selecting target and target binder pairs for preparing a composition for
CC treating cancer. Furthermore, the method may be utilised during gene
CC therapy procedures. The current sequence is that of the cancer-related
CC DGI-5-binder peptide of the invention.

PS Disclosure; Page 54; 81pp; English.
XX
CC The invention relates to a vaccine for alleviating or preventing
CC autoimmune disorders induced by infection with Epstein-Barr virus (EBV).
CC It comprises EBV or a component in a carrier for administration of the
CC virus or viral component to alleviate or prevent the autoimmune disorder.
CC Also claimed are: (1) a diagnostic test kit comprising: (a) reagents
CC which can be used to detect levels of antibodies to EBV, indicators of
CC EBV infection of cells, or levels of EBV DNA or protein in a patient; (b)
CC control samples from individuals not at risk of developing an autoimmune
CC disease; and (c) a device for determining the differences in levels of a
CC patient and control samples to distinguish individuals at higher risk of
CC developing an autoimmune disease from those at lower risk of developing
CC an autoimmune disease; and (2) a method for screening for genetic markers
CC or risk factors for development of autoimmune disorders induced by
CC infection with EBV comprising comparing the responses of different
CC strains of the same species of an animal vaccinated with EBV or a
CC component to induce an autoimmune response in at least one of the strains
CC and comparing the differences in the genetics of the different strains to
CC identify potential genetic markers or risk factors. The methods can be
CC used for the prevention, diagnosis, and treatment of autoimmune diseases
CC having EBV as an etiological agent. The autoimmune diseases may be e.g.
CC systemic lupus erythematosus, Sjogren's syndrome, rheumatoid arthritis,
CC juvenile onset diabetes mellitus, Wegener's granulomatosis, etc. The
CC present sequence is shown in the specification

 PT B cell clonal toxin useful for treating autoimmune disorders such as
 PT Grave's disease, myocardial infarction, Crohn's disease, multiple
 PT sclerosis, comprises a group that causes toxin to be internalized by B
 PT cell.
 PT
 XX
 PS Disclosure; Page 33; 46pp; English.
 XX
 XX This invention relates to a B cell clonal toxin. The toxin is made from
 CC two moieties, the first causes the toxin to be internalised by a B cell,
 CC and the second is a biologically acceptable toxin. The invention includes
 CC a method for inactivating/filling an antigen specific B cell. A target B
 CC cell is contacted with an effective amount of a B cell clonal toxin. The
 CC method is useful for selective immunosuppression in conditions
 CC characterised by the presence of an unwanted or deleterious immune
 CC response, e.g. in the treatment of antigen specific antibody mediated
 CC disease conditions. Use of the B cell clonal toxin can result in
 CC immunosuppressive; antiinflammatory; antiallergic; virucide; antidiabetic
 CC ; thymometric; antithyroid; vasotropic; cardiac; antitumor;
 CC neuroprotective; antirheumatic; antiarthritic; dermatological;
 CC ophthalmological; and nephrotoxic activity. The toxin is particularly
 CC useful for treating a host suffering from an antigen specific antibody
 CC mediated disease condition, where the antigen specific antibody is

CC produced by an antigen-reactive B cell population present in a host. The
 CC toxin is useful for treating allergies, viral disease conditions, and
 CC autoimmune disorders. Also treated are skin diseases; autoimmune
 CC endocrinopathies; vasculitic syndromes; cardiovascular disease;
 CC immunohematologic disorders; gastrointestinal diseases; neurologic
 CC diseases; collagen vascular diseases; renal diseases; pulmonary diseases;
 CC and infertility disorders. The present sequence represents a UI RNP with
 CC A and C proteins epitope. An antibody response to this antigen is
 CC implicated in systemic lupus erythematosus, a disorder which may be
 CC treated using the toxin of the invention

PT New vaccine preventing or alleviating autoimmune disorders induced by the
 PT Epstein-Barr virus, such as diabetes mellitus, rheumatoid arthritis,
 PT multiple sclerosis, systemic lupus erythematosus, atopic dermatitis and
 PT psoriasis.

XX Example 1, Fig 3, 41pp; English.

CC The invention relates to a vaccine for alleviating or preventing
 CC autoimmune disorders induced by infection with Epstein-Barr virus,
 CC comprising an Epstein-Barr virus or a component in a carrier for
 CC administration to alleviate or prevent the autoimmune disorders. The
 CC methods and compositions of the present invention are useful for
 CC diagnosing, preventing, treating and/or alleviating autoimmune disorders,
 CC such as diabetes mellitus, rheumatoid arthritis, juvenile rheumatoid
 CC arthritis, osteoarthritis, psoriatic arthritis, multiple sclerosis,
 CC encephalomyelitis, myasthenia gravis, systemic lupus erythematosus,

CC autoimmune thyroiditis, atopic dermatitis, eczematous dermatitis,
 CC psoriasis, Sjogren's Syndrome, Crohn's disease, aphthous ulcer, lilytis,
 CC conjunctivitis, keratoconjunctivitis, ulcerative colitis, asthma,
 CC allergic asthma, cutaneous lupus erythematosus, scleroderma, vaginitis,
 CC proctitis, drug eruptions, leprosy reversal reactions, erythema
 CC nodosum, leprosy, autoimmune uveitis, allergic encephalomyelitis, acute
 CC necrotizing haemorrhagic encephalopathy, idiopathic bilateral progressive
 CC sensorineural hearing loss, aplastic anaemia, pure red cell anaemia,
 CC idiopathic thrombocytopenia, polychondritis, Wegener's granulomatosis,
 CC chronic active hepatitis, Stevens-Johnson syndrome, idiopathic sprue,
 CC lichen planus, Graves' disease, sarcoidosis, primary biliary cirrhosis,
 CC uveitis posterior, interstitial lung fibrosis, graft-versus-host disease,
 CC and allergy. The present sequence represents an Epstein-Barr virus
 CC nuclear antigen peptide used in the method of the invention. (Updated on

PT Bradykinin agonists comprising maximakinin and its fragments, useful for
 PT selectively stimulating arterial smooth muscle bradykinin receptors and
 PT for treating cardiovascular disease e.g. ischemic heart disease.

XX Claim 7; SEQ ID NO 3; 67pp; English.

CC The present invention relates to a bradykinin agonist, useful in the
 CC selective stimulation of arterial smooth muscle bradykinin receptors or
 CC treatment of cardiovascular disease comprises maximakinin, its analogue
 CC or fragment or their encoding nucleic acids. Maximakinin derivatives are
 CC used in the preparation of a medicament for selectively stimulating
 CC arterial smooth muscle bradykinin receptors; for treating cardiovascular
 CC disease (claimed) e.g. ischemic heart disease, ischemic disease of other
 CC organs or organ systems, vascular stenosis, occlusion to peripheral
 CC vessels (such as limb), hypertension; and on the treatment of a condition
 CC or disorder that can be ameliorated with the selective bradykinin

CC receptor agonist. Also useful for treatment of a condition for which
CC dilation of vessels is required e.g. treatment of tumours and cancers,
CC and for gene therapy. Maximakinin is a selective bradykinin receptor,
CC agonist and exhibits both tissue and receptor specific targeting. This
CC tissue selectivity enables the use of the peptides in the treatment of
CC diseases of the cardiovascular system while minimizing the side effects
CC associated with the use of less selective agents. The present sequence
CC represents a maximakinin derivative as a bradykinin agonist

 DR
 XX New synthetic or partially purified peptides that can bind to specific
 PT subunits of G proteins, useful for detecting the activation or
 PT deactivation of a G protein-coupled receptor (GPCR) or for identifying
 PT allosteric modulators of GPCR.
 XX
 XX Example 300d; SEQ ID NO 81; 242bp; English.
 PS
 XX The invention relates to a novel non-naturally occurring and/or at least
 CC partially purified peptide, which does not comprise a V-H or V-L homology
 CC unit of an antibody and specifically binds to an activated G alpha
 CC subunit of a G protein. The invention further comprises: an assay kit for
 CC the identification of the activation state of a G protein coupled
 CC receptor (GPCR), the kit comprising a first peptide cited above labeled
 CC with a first label; methods of identifying the activation state of a GPCR
 CC; a method of identifying a modulator of a GPCR; a method of determining
 CC the presence or amount of a modulator of a GPCR in a sample; methods of
 CC identifying a substance as an agonist or antagonist of GPCR; and a method
 CC of identifying a G-alpha subunit which interacts with a GPCR. The
 CC composition and methods are useful in detecting the activation or
 CC deactivation of a G protein-coupled receptor or in monitoring the
 CC activation state of a GPCR within a cell. These may also be used for
 CC identifying allosteric modulators of GPCRs. This sequence represents a G
 CC protein library 9-alpha peptide oligo of the invention.

 XX Bradykinin agonists comprising maximakinin and its fragments, useful for
 PT selectively stimulating arterial smooth muscle bradykinin receptors and
 PT for treating cardiovascular disease e.g. ischemic heart disease.
 XX
 PS Disclosure; SEQ ID NO 1; 67bp; English.
 XX

CC The present invention relates to a bradykinin agonist, useful in the
 CC selective stimulation of arterial smooth muscle bradykinin receptors or
 CC treatment of cardiovascular disease comprises maximakinin, its analogue
 CC or fragment or their encoding nucleic acids. Maximakinin derivatives are
 CC used in the preparation of a medicament for selectively stimulating
 CC arterial smooth muscle bradykinin receptors; for treating cardiovascular
 CC disease (claimed) e.g. ischemic heart disease, ischemic disease of other
 CC organs or organ systems, vascular stenosis, occlusion to peripheral
 CC vessels (such as limb), hypertension; and on the treatment of a condition
 CC or disorder that can be ameliorated with the selective bradykinin
 CC receptor agonist. Also useful for treatment of a condition for which
 CC dilation of vessels is required e.g. treatment of tumours and cancers,
 CC and for gene therapy. Maximakinin is a selective bradykinin receptor
 CC agonist and exhibits both tissue and receptor specific targeting. This
 CC tissue selectivity enables the use of the peptides in the treatment of
 CC diseases of the cardiovascular system while minimizing the side effects
 CC associated with the use of less selective agents. The present sequence
 XX represents maximakinin 1-19 as a bradykinin agonist

 XX
 XX Vaccines derived from M. tuberculosis major abundant extracellular
 PT proteins - are easy to prepare and less toxic than conventional killed or
 PT attenuated vaccines, useful for protecting against or treating
 PT Mycobacterial infections.

XX Claim 49; Page 162; 193pp; English.
 PS
 XX
 CC A vaccinating agent for promoting an immune response in a mammal against
 CC Mycobacterium pathogens comprises at least one immunodominant epitope of
 CC at least one majorly abundant extracellular protein, i.e. the
 CC M.tuberculosis 110, 80, 71, 58, 45, 32A, 32B, 30, 24, 23.5, 23, 16, 14 or
 CC 12 kD proteins, or their analogues, homologues and subunits. The present
 CC sequence represents an immunodominant epitope from the major abundant
 CC extracellular product 30 kD protein. The vaccinating agents are used to
 CC protect against (or to treat existing) infections by Mycobacterium
 CC (especially M. tuberculosis) while the epitopes can also be used to
 CC detect presence of an immune response to a Mycobacterium pathogen. The
 CC vectors, containing the DNA for the extracellular proteins, are used to
 CC transform cells for production of recombinant DNA molecules. More
 CC generally the DNA from other pathogens can be used in vaccines, e.g.
 CC against other bacteria, viruses, fungi and protozoa. Since different
 CC combinations of DNA can be used, a wide range of effective compositions
 CC can be produced. They generate a response against the antigens most often
 CC found on infected cells during the infection, regardless of the strength
 CC or specificity of the immune response. The vaccines are easy to produce
 CC and less toxic than known killed or attenuated vaccines, so can be given
 CC to immunocompromised subjects, e.g. those with HIV infection

 PT Vaccines against Mycobacterium containing major extracellular proteins -
 PT used to, e.g. induce protective and therapeutic immune responses, and for
 PT detecting an immune response.
 XX
 PS Example 28; Page 96; 236pp; English.
 XX
 CC Sequences shown in AAW75587 to AAW75641 represent synthetic peptides

CC derived from the native 30kD major secretory protein of M. tuberculosis.
 CC These peptides are used for splenic lymphocyte proliferation assays to
 CC identify the immunodominant T-cell epitope of the 30kD protein. The
 CC invention provides an agent for vaccinating mammals against
 CC Mycobacterium. The agent comprises at least one of the major abundant
 CC extracellular 110, 80, 71, 58, 45, 32A, 32B, 30, 24, 23.5, 23, 16, 14 or
 CC 12 kD proteins of M. tuberculosis, or at least 1 of their immunodominant
 CC epitopes and interleukin-12 (IL-12) or Mf59 as adjuvants. The agent
 CC containing the nucleic acid encoding the extracellular products are used
 CC to raise a protective or therapeutic immune response against
 CC Mycobacterium, specifically M. tuberculosis. The immunodominant epitopes
 CC can also be used (typically in a cutaneous hypersensitivity test) to
 CC detect an immune response to vaccination. Preparation of the agent does
 CC not require selection of the most immunogenic products, so large scale
 CC production and purification are easy, resulting in a consistent,
 CC standardised formulation, having lower toxicity than killed or attenuated
 CC vaccines. The agents provide a rapid and effective response (including a
 CC strong cell-mediated component) and are safe even in immunocompromised
 CC subjects. They prevent development of an opsonising humoral response that
 CC might spread intracellular pathogens

PT Composition for treating angiogenesis mediated diseases such as tumor and
PT psoriasis, comprises a peptide or its derivative capable of specific
PT binding with high affinity vascular endothelial growth factor receptor-1.
XX
XX Example 16; Page 70; 86pp; English.
XX
XX The present invention relates to a pharmaceutical composition comprising
CC of a peptide ligand, or its derivative, which is capable of specific
CC binding with high affinity to vascular endothelial growth factor (VEGF)
CC receptor-1 or its derivative and structurally similar receptors. The
CC invention also provides peptide ligands that are capable of inhibiting
CC angiogenesis induced by VEGF. The peptide ligands of the invention are
CC useful for treating a disease associated with angiogenesis in a patient.
CC They are also useful for treating angiogenesis mediated diseases e.g.
CC solid tumours, rheumatoid arthritis and psoriasis, for treating diseases
CC of excessive or abnormal stimulation of endothelial cells e.g. Crohn's
CC disease, atherosclerosis and scleroderma, for treating diseases that have
CC angiogenesis as a pathological consequence e.g. cat scratch disease and
CC ulcers, as a birth control agent, and for treating diseases associated
CC with neovascularisation of the eye e.g. atopic keratitis and Pagen's
CC disease, inflammatory disorders e.g. ulcerative colitis and inflammatory
CC bowel disease, and neoplastic and non-neoplastic diseases and disorders.
CC The peptide ligands are also useful as a targeting group to improve the
CC delivery of a biological agent used for therapeutic or diagnostic
CC purpose. The present sequence represents peptide encoded by
CC oligonucleotide ONV5.10

 PT New isolated 0772P polypeptides and polynucleotides, useful in gene
 PT therapy, particularly for treating or diagnosing cancer, e.g. ovarian
 PT cancer.
 XX
 PS Claim 34; SEQ ID NO 397; 371pp; English.
 XX
 CC The invention relates to an isolated 0772P polypeptide, which has the
 CC structure fully defined in the specification. The composition containing
 CC the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells
 CC or antigen presenting cells are useful for stimulating an immune response
 CC and treating ovarian cancer. Detecting the presence of the
 CC polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian
 CC carcinoma CNAs and protein CDNs were identified using microarray
 CC technology. The present sequence represents a human OES antibody epitope.

 PT Claim 2; SEQ ID NO 603; 399pp; English.
 XX
 PS The invention describes nucleic acids (I) and the polypeptides (II) they
 PS encode. The nucleic acids (I) may be used for preventing, diagnosing and
 PS treating diseases related to their aberrant expression i.e. breast
 PS cancers. For example, (I) and (II) may be used to treat disorders
 PS associated with decreased expression by rectifying mutations or deletions
 PS in a patient's genome that affect the activity of (II) by expressing
 PS inactive proteins or to supplement the patient's own production of (II).
 PS Additionally, (I) may be used to produce (II), by inserting (I) into a
 PS host cell and culturing the cell to express the protein (II). (I) And its
 PS complementary sequences may also be used as DNA probes in diagnostic
 PS assays to detect and quantitate the presence of similar nucleic acids in
 PS samples, and therefore which patients may be in need of restorative
 PS therapy. The host cell may also be used as antigens in the production of
 PS antibodies against (II) and in assays to identify modulators of (II)'s
 PS expression and activity. The anti-(II) antibodies, agonists and
 PS antagonists may be used to regulate expression and activity and as
 PS diagnostic agents for detecting the presence of (II) in samples (e.g. by
 PS immunoassay). This sequence represents a secreted ovarian carcinoma
 PS antigen.

XX
XX Substances with activity of promoting or inhibiting platelet aggregation
XX screened by using factor gp4, applicable in treatment of its
XX accompanying diseases like colon cancer, myocardial infarction and
XX arteriosclerosis.
XX
XX Example 12; SEQ ID NO 46; 219pp; Japanese.
XX
XX The invention comprises a method for screening substances for promoting
XX or inhibiting platelet aggregation. The method involves: culturing gp44-
XX expressing cells in the presence/absence of a test substance, detecting
XX expression of mRNAs, and measuring the expression doses of the detected
XX mRNAs for comparison and selection. The method of the invention is useful
XX in the development of drugs for the treatment of: colon cancer, rectal
XX cancer, testicular cancer, seminoma, flat-epithelial carcinoma, cancer
XX metastasis, pulmonary thrombosis, cerebral infarction, myocardial
XX infarction, arteriosclerosis, bleeding tendency, blood clotting disorder,
XX haemophilia, uremia and chronic myeloproliferative disorder. The present
XX amino acid sequence represents a mutated gp38p peptide that was used in
XX an example of the invention.

XX
XX Novel purified polypeptide comprising WW domain, useful for drug
XX discovery, modification and refinement, for discovering polypeptides
XX involved in pharmacological activities, or as an immunogen to generate
XX antibodies.
XX
XX Example; Page 22; 133pp; English.
XX
XX The invention describes a purified polypeptide (I) comprising a WW domain
XX which has a sequence (S1) selected from 11 sequences fully defined in the
XX specification, a sequence (S2) selected from 48 sequences fully defined
XX in the specification or a sequence (S3) comprising 683, 906, 224 or 725
XX amino acids fully defined in the specification. (I) is useful for
XX screening a potential drug candidate, by allowing (I) to come into
XX contact with at least one recognition unit having a selective affinity
XX for the WW domain in (I), in the presence of an amount of a potential
XX drug candidate, such that (I) and the recognition unit are capable of
XX interacting when brought into contact with one another in the absence of
XX the drug candidate, and determining the effect, if any, of the presence
XX of the amount of the drug candidate on the interaction of (I) with the
XX recognition unit. (I) is useful for drug discovery, modification and
XX refinement, for discovering polypeptides involved in pharmacological
XX activities, or as an immunogen to generate antibodies. This is the amino
XX acid sequence of a peptide recognition unit used to screen cDNA
XX expression libraries for WW domain binding proteins.

PT therapeutics.
XX
PS Claim 18; Page 50; 77pp; English.
XX
CC The invention relates to an isolated PROST 03 polypeptide (I) and to the
CC polynucleotide (II) encoding PROST 03. Fragments of (I) were used to
CC generate antibodies (III) to PROST 03. (III) is useful for selectively
CC destroying a cell expressing (I), and for treating a disease-state
CC associated with expression of PROST 03 in a human patient. (III) is
CC useful for diagnosing metastasis associated with (I), in a subject. (I)
CC is also useful for diagnosing and treating diseases of cell proliferation
CC such as prostate cancer. (I) is also useful for generating antibodies to
CC PROST 03. (III) is useful in detecting the levels of PROST 03
CC polypeptides in cells and tissues, and in targeting drugs to primary and
CC metastatic tumours. (I) is also useful for stimulating immune response to
CC PROST 03 containing cells. (II) is useful in diagnostic assays for
CC detecting the levels of polynucleotides encoding PROST 03 in cells and
CC tissues. (II) is useful as DNA probes, as targets for antisense and
CC ribozyme therapy, and as templates for the production of antisense
CC polynucleotides. (I) and (II) are useful in research, biological,
CC clinical and therapeutic purposes. The present sequence represents the
CC amino acid sequence of human PROST 03 immunogenic fragment Pep8, used to
CC generate anti-PROST 03 antibodies

PT	Novel crystallized, recombinant bacterial polypeptide, useful as targets	
PT	for pathogenic bacteria such as Helicobacter pylori, Staphylococcus	
PT	aureus, for detecting pathogenic species in biological sample, and in	
PT	drug designing.	
XX		
PS	Example 1, Fig 8; 637pp; English.	
XX		
CC	The invention relates to a composition (1) comprising purified	
CC	polypeptides from bacteria. Also described: (1) a crystallized,	
CC	recombinant polypeptide comprising an amino acid sequence of (1), where	
CC	the crystallized, recombinant polypeptide and a co-factor or a small	
CC	organic molecule, where the complex is in crystal form; and (3) a host	
CC	cell comprising a nucleic acid encoding a polypeptide of (1), where a	
CC	culture of the host cell produces at least about 1 mg of the polypeptide	
CC	per liter of culture and the polypeptide is at least about one-third	
CC	soluble as measured by gel electrophoresis. (1) can be used as a target	
CC	for pathogenic bacteria, useful for detecting the presence of a	
CC	pathogenic species in a biological sample. (1) is useful for monitoring	
CC	the effectiveness of anti-pathogenic treatments in an individual	
CC	suffering from a disease or disorder caused by a pathogenic bacteria,	
CC	such as infections. (1) is also useful in drug design and screening, for	
CC	identifying inhibitors of (1), for designing a potential compound that is	
CC	useful for treating or preventing pathogenic diseases or disorders, for	
CC	assessing the activity of small molecules and other modulators in in	
CC	vitro assay, and for developing antimicrobial agents. The present	
CC	sequence represents a Staphylococcus aureus lyeal tRNA synthetase	
CC	peptide, which is used in an example from the present invention.

PT New Mycobacterium tuberculosis antigens, useful for diagnosing
PT tuberculosis, and as a vaccine for treating or preventing infections
PT caused by species of tuberculosis complex.

PS Example 3; Page 96; 11pp; English.

XX The invention relates to a substantially pure polypeptide comprising an
CC amino acid sequence selected from RV0284, RV0285, RV0455C, RV0569,
CC RV1195, RV1386, RV3477, RV3878, RV3879C or W3106.1 (also disclosed are
CC ORF13A and RV0284Ct), or their immunogenic portion, nucleic acids
CC encoding them and an amino acid sequence analogue having at least 70%
CC sequence identity to the polypeptide and is immunogenic. The protein is
CC useful in preparing a pharmaceutical composition for diagnosing
CC tuberculosis and in preparing a vaccine against tuberculosis caused by
CC virulent mycobacteria. The vaccine or immunogenic/ pharmaceutical
CC composition can be used prophylactically in a subject not infected with a
CC virulent mycobacterium, or therapeutically in a subject already infected
CC with a virulent mycobacterium. The protein is useful for preventing,
CC treating and detecting infections caused by species of tuberculosis
CC complex (M. tuberculosis, M. bovis, M. africanum). The nucleic acids may
CC be used for effecting in vivo expression of the antigen, and in
CC diagnostic assays for detecting the presence of pathogenic organisms in a
CC sample. The vaccine is an improvement of the living BCG vaccine presently
CC available, where one or more copies of the DNA sequence encoding one or
CC more polypeptide has been incorporated into the genome of the
CC microorganism to allow the microorganism to express and secrete the
CC polypeptide. Incorporation of more than one copy of a nucleotide sequence
CC enhances the immune response. The present sequence represents an
CC immunogenic peptide derived from an M. tuberculosis protein of the
CC invention

PT New polypeptide that binds to vascular endothelial growth factor receptor
PT -2, useful for diagnosis and treatment of e.g. tumors, and its conjugates
PT with therapeutic or imaging agents.

PS Claim 80; SEQ ID NO 170; 350pp; English.

XX This invention relates to novel peptides useful for detecting and
CC targeting primary receptors on endothelial cells that bind vascular
CC endothelial growth factor (VEGF). Specifically, it refers to detecting
CC the receptor tyrosine kinase identified as VEGF-2, which is also known as
CC kinase domain region (KDR) and foetal liver kinase-1 (Flk-1). The present
CC invention describes the involvement of the VEGF/KDR complex as important
CC in angiogenesis, and that VEGF/KDR complex binding or KDR binding
CC polypeptides can be used for imaging neoplastic tumours. Furthermore,
CC these compositions are useful for targeting radiotherapeutics to specific
CC sites for treating diseases associated with KDR activation, which include
CC malaria, HIV, SIV infection, simian haemorrhagic fever virus and
CC enterohaemorrhagic Escherichia coli infection. Accordingly, these
CC compositions exhibit various activities including protozoacidal, anti-
CC HIV, vincidol, antibacterial and cytostatic. This peptide sequence is a
CC high affinity binding peptide of KDR and the VEGF/KDR complex, part of
CC the Lin20 peptide library of the invention.

 XX
 PT Novel isolated polypeptide having ability to bind to kinase domain region
 PT or vascular endothelial growth factor/kinase domain region complex,
 PT useful in inhibiting vascular endothelial growth factor activation of
 PT kinase domain region.
 XX
 PS Claim 12; SEQ ID NO 170; 470pp; English.
 XX
 CC This invention relates to novel isolated peptides that can bind to a
 CC kinase domain region (KDR) or vascular endothelial growth factor
 CC (VEGF)/KDR complex. Specifically, it refers to polypeptides, peptide
 CC dimers and multimeric complexes that bind with high affinity to KDR (also
 CC known as the VEGF receptor 2 (VEGFR2) and foetal liver kinase 1 (Flk-1))
 CC or the VEGF/KDR complex, and as such due to the involvement of VEGF and
 CC KDR in angiogenesis these binding peptides can be used for imaging
 CC important sites of angiogenesis, as well as in targeting therapeutics to
 CC such sites. The present invention describes these peptides as useful for
 CC promoting or inhibiting angiogenesis and pathogenic conditions associated
 CC thereof such as neoplastic tumours. Furthermore, these binding peptides
 CC are useful for treating malaria, HIV infection, SIV infection, simian
 CC haemorrhagic fever virus infection and enterohaemorrhagic Escherichia
 CC coli infection. Accordingly, they exhibit cytostatic, antiangiogenic,
 CC antimalarial, anti-HIV, virucidal and antibacterial activities. In
 CC particular, they inhibit VEGF activation of its receptor (i.e. KDR), and
 CC enable efficient detection, imaging and localisation of activated
 CC endothelial cells exhibiting upregulated KDR expression. This peptide
 CC sequence is a high affinity KDR and VEGF/KDR binding peptide belonging to
 CC the secondary linear linc20 library of the invention.

 PT HLA-binding oligopeptide and an immunoregulator contg it - used in the
 PT treatment of auto-immune disease.
 XX
 PS Claim 4; Page 43; 61pp; Japanese.
 XX
 CC This peptide is an example of a peptide which binds to a human leucocyte
 CC antigen HLA-DQ4 molecule. The peptide was isolated from a phagemid
 CC combinatorial library comprising the sequence AAV05953, by screening with
 CC an HLA-DQ4 molecule. The peptide is used for the treatment of autoimmune
 CC disease, or especially for treatment of viral diseases

PT New composition comprising a substance that modulates the status of
PT 213P1F11, or a molecule that is modulated by 213P1F11, useful for
PT detecting or treating cancer, e.g. pancreatic or rectal cancer.

XX Example 13; Page 130; 334pp; English.

PS The invention describes a composition comprising a substance that
XX modulates the status of 213P1F11, or a molecule that is modulated by
CC 213P1F11, where the status of the cell that expresses 213P1F11 is
CC modulated and 213P1F11 is a gene overexpressed in many cancers. Also
CC described are: a pharmaceutical composition comprising the composition
CC cited above in a unit dose form; an antibody or its fragment; a non-human
CC transgenic animal that produced the antibody; a hybridoma that produces
CC the antibody; delivering a cytotoxic agent or a diagnostic agent to the
CC cell that expresses 213P1F11; a polynucleotide that encodes the protein;
CC inhibiting growth of cancer cells that expresses 213P1F11; generating a
CC mammalian immune response; detecting the presence of 213P1F11-related
CC protein or polynucleotide in a sample; and detecting the presence of
CC cancer in an individual. The compositions, molecules and methods are
CC useful for detecting and treating cancer, e.g. pancreatic or rectal
CC cancer. This is the amino acid sequence of a human 213P1F11 peptide
CC epitope bearing a human leukocyte antigen (HLA) class I or class II motif
CC useful in the creation of an HLA vaccine to modulate 213P1F11.

XX
CC The invention describes a composition comprising a substance that
CC modulates the status of 213p1f1, or a molecule that is modulated by
CC 213p1f1, where the status of the cell that expresses 213p1f1 is
CC modulated and 213p1f1 is a gene overexpressed in many cancers. Also
CC described are: a pharmaceutical composition comprising the composition
CC cited above in a unit dose form; an antibody or its fragment; a non-human
CC transgenic animal that produced the antibody; a hybridoma that produces
CC the antibody; delivering a cytotoxic agent or a diagnostic agent to the
CC cell that expresses 213p1f1; a polynucleotide that encodes the protein;
CC inhibiting growth of cancer cells that expresses 213p1f1; generating a
CC mammalian immune response; detecting the presence of 213p1f1-related
CC protein or polynucleotide in a sample; and detecting the presence of
CC cancer in an individual. The compositions, molecules and methods are
CC useful for detecting and treating cancer, e.g. pancreatic or rectal
CC cancer. This is the amino acid sequence of a human 213p1f1 peptide
CC epitope bearing a human leukocyte antigen (HLA) class I or class II motif
CC useful in the creation of an HLA vaccine to modulate 213p1f1.

XX
XX New composition comprising a substance that modulates the status of
PT 213p1f1, or a molecule that is modulated by 213p1f1, useful for
PT detecting or treating cancer, e.g. pancreatic or rectal cancer.
XX
XX Example 13; Page 143; 334pp; English.
XX
XX The invention describes a composition comprising a substance that
CC modulates the status of 213p1f1, or a molecule that is modulated by
CC 213p1f1, where the status of the cell that expresses 213p1f1 is
CC modulated and 213p1f1 is a gene overexpressed in many cancers. Also
CC described are: a pharmaceutical composition comprising the composition
CC cited above in a unit dose form; an antibody or its fragment; a non-human
CC transgenic animal that produced the antibody; a hybridoma that produces
CC the antibody; delivering a cytotoxic agent or a diagnostic agent to the
CC cell that expresses 213p1f1; a polynucleotide that encodes the protein;
CC inhibiting growth of cancer cells that expresses 213p1f1; generating a
CC mammalian immune response; detecting the presence of 213p1f1-related
CC protein or polynucleotide in a sample; and detecting the presence of
CC cancer in an individual. The compositions, molecules and methods are
CC useful for detecting and treating cancer, e.g. pancreatic or rectal
CC cancer. This is the amino acid sequence of a human 213p1f1 peptide
CC epitope bearing a human leukocyte antigen (HLA) class I or class II motif
CC useful in the creation of an HLA vaccine to modulate 213p1f1.

PS
XX
XX The invention describes a composition comprising a substance that
CC modulates the status of 213p1f1, or a molecule that is modulated by
CC 213p1f1, where the status of the cell that expresses 213p1f1 is
CC modulated and 213p1f1 is a gene overexpressed in many cancers. Also
CC described are: a pharmaceutical composition comprising the composition
CC cited above in a unit dose form; an antibody or its fragment; a non-human
CC transgenic animal that produced the antibody; a hybridoma that produces
CC the antibody; delivering a cytotoxic agent or a diagnostic agent to the
CC cell that expresses 213p1f1; a polynucleotide that encodes the protein;
CC inhibiting growth of cancer cells that expresses 213p1f1; generating a
CC mammalian immune response; detecting the presence of 213p1f1-related
CC protein or polynucleotide in a sample; and detecting the presence of
CC cancer in an individual. The compositions, molecules and methods are
CC useful for detecting and treating cancer, e.g. pancreatic or rectal
CC cancer. This is the amino acid sequence of a human 213p1f1 peptide
CC epitope bearing a human leukocyte antigen (HLA) class I or class II motif
CC useful in the creation of an HLA vaccine to modulate 213p1f1.

XX New composition comprising a substance that modulates the status of
PT 213P1P11, or a molecule that is modulated by 213P1P11, useful for
PT detecting or treating cancer, e.g. pancreatic or rectal cancer.
XX
XX Example 13; Page 195; 334pp; English.
PS
XX The invention describes a composition comprising a substance that
XX modulates the status of 213P1P11, or a molecule that is modulated by
CC 213P1P11, where the status of the cell that expresses 213P1P11 is
CC modulated and 213P1P11 is a gene overexpressed in many cancers. Also
CC described are: a pharmaceutical composition comprising the composition
CC cited above in a unit dose form; an antibody or its fragment; a non-human
CC transgenic animal that produced the antibody; a hybridoma that produces
CC the antibody; delivering a cytotoxic agent or a diagnostic agent to the
CC cell that expresses 213P1P11; a polynucleotide that encodes the protein;
CC inhibiting growth of cancer cells that expresses 213P1P11; generating a
CC mammalian immune response; detecting the presence of 213P1P11-related
CC protein or polynucleotide in a sample; and detecting the presence of
CC cancer in an individual. The compositions, molecules and methods are
CC useful for detecting and treating cancer, e.g. pancreatic or rectal
CC cancer. This is the amino acid sequence of a human 213P1P11 peptide
CC epitope bearing a human leukocyte antigen (HLA) class I or class II motif
CC useful in the creation of an HLA vaccine to modulate 213P1P11.

XX New human immunopolypeptide with binding specificity for certain envelope
PT glycoproteins and nonstructural proteins of hepatitis C virus (HCV), for
PT diagnosing or treating patients having or suspected of having HCV
PT infection.
XX
XX Claim 1; Fig 17; 308bp; English.
PS
XX
XX The present invention relates to human immunopolypeptides, produced by a
CC phage transected cell library. The present sequence is one such
CC immunopolypeptide. The immunopolypeptides have binding specificity for
CC envelope glycoprotein E2 and nonstructural protein NS3 of hepatitis C
CC virus (HCV). E2 glycoprotein is believed to be responsible for target
CC cell binding and contains neutralizing epitopes, while NS3 is thought to
CC be involved in the replication of HCV. The immunopolypeptides are useful
CC for diagnosing and treating a patient having or suspected to be having
CC HCV infection.

PT Screening for modulators of TGF-beta and/or bone morphogenic protein

PT (BMP) mediated signaling useful for treating cancer and osteoporosis by
 PT evaluating the ability of agents to modulate Smad protein degradation.
 XX
 PS Example 2; Page 31; 75pp; English.

CC The present sequence is a Smad pY motif. The pY motif binds to the WW
CC domain of HECT (homologous to E6 carboxyl terminus) E3 ubiquitin ligase.
CC resulting in ubiquitination of Smad by the E3 ubiquitin ligase. The
CC sequence is provided in a specification relating to a method for
CC screening for agents that modulate transforming growth factor (TGF)-beta
CC and/or bone morphogenic protein (BMP)-mediated signaling. The method
CC involves evaluating the effect of an agent on binding of HECT E3
CC ubiquitin ligase WW domain to Smad pY motif, on ubiquitination of Smad
CC protein by E3 ubiquitin ligase, or on the cellular levels of Smad protein
CC HECT E3 ubiquitin ligase activity. The method is useful for stimulating
CC bone formation in a patient or treating a condition associated with
CC insufficient TGF-beta and/or BMP-mediated cell signaling. Agents that
CC inhibit BMP-mediated signaling are useful for treating inflammation,
CC ageing, cancer and infectious diseases. Agents that augment BMP-mediated
CC signaling are useful for stimulating bone anabolism as well as treating
CC broken bones, osteoporosis, and acute or chronic renal failure. Agents
CC that inhibit TGF-mediated signaling are useful for treating cancer,
CC inflammation, neurodegeneration and fibrosis

PT New recombinant fusion protein comprising detection and first

PT useful for detecting binding of a molecule of interest.

PS Claim 8; SEQ ID NO 356; 101pp; English.

CC The present invention describes a recombinant fusion protein (1) for
CC detecting binding of a molecule of interest. (1) comprises: (a) a
CC detection domain; (b) a first localisation domain; and (c) a binding
CC domain for the molecule of interest. The detection domain, the first
CC localisation domain and the binding domain for the molecule of interest
CC constituting the recombinant fusion protein for detecting binding of a
CC molecule of interest are operably linked. The binding domain for the
CC -20 amino acid residues. The first localisation domain and the binding
CC domain for the molecule of interest both do not occur in a single non-
CC recombinant protein with the same spacing as in the recombinant fusion
CC protein for detecting binding of a molecule of interest. Also described:
CC (1) a recombinant nucleic acid encoding the recombinant fusion protein;
CC (2) a recombinant expression vector comprising the nucleic acid control
CC sequences operably linked to the recombinant nucleic acid molecule; (3) a
CC genetically engineered host cell transfected with the recombinant
CC expression vector; (4) a kit for detecting binding of the molecule of
CC interest; and (5) a method for identifying compounds that alter the
CC binding of the molecule of interest. The recombinant fusion protein is
CC useful for detecting binding of a molecule of interest. The recombinant
CC fusion protein eliminates the need to construct two or more chimeric
CC proteins and enables the monitoring of biochemical events in live, intact
CC or fixed cells. The present sequence is used in the exemplification of
CC the present invention.

PT Novel peptide substrate or its salt, useful for measuring histone
deacetylase activity.

PS Disclosure; SEQ ID NO 57; 39pp; Japanese.

CC This invention relates to a novel method for measuring the histone-
CC deacetylase (HDAC) activity of a substrate using specific radioactivity,
CC fluorescence or a colour developing substrate. Specifically, it refers to
CC compound such as peptidyl-Lys(NAC)-WCA, which comprises a protecting group
CC of a hydrogen atom or an amino terminus, a group in which deacetylation
CC is carried out by the histone deacetylase linked to an acetylated lysine
CC residue that in turn is linked to the fluorescent group MCA (7-amino 4-
CC methylcoumarin). The present invention describes a method for measuring
CC HDAC activity, as well as identifying the subtype of histone deacetylase.
CC Furthermore, it can be used to screen for histone deacetylase inhibitors,
CC such that they can be used to regulate gene expression. Accordingly,
CC these compositions can be used to treat cancer and exhibit cytostatic
CC activities. This peptide sequence is a C-terminal acetylated human
CC peptide used to determine HDAC activity of the invention.

 PT New composition comprising a substance that modulates the status of
 PT 213P1P11, or a molecule that is modulated by 213P1P11, useful for
 PT detecting or treating cancer, e.g. pancreatic or rectal cancer.
 XX
 PS Example 13; Page 233; 334pp; English.
 XX
 CC The invention describes a composition comprising a substance that
 CC modulates the status of 213P1P11, or a molecule that is modulated by
 CC 213P1P11, where the status of the cell that expresses 213P1P11 is
 CC modulated and 213P1P11 is a gene overexpressed in many cancers. Also
 CC described are: a pharmaceutical composition comprising the composition
 CC cited above in a unit dose form; an antibody or its fragment; a non-human
 CC transgenic animal that produced the antibody; a hybridoma that produces
 CC the antibody; delivering a cytotoxic agent or a diagnostic agent to the
 CC cell that expresses 213P1P11; a polynucleotide that encodes the protein;
 CC inhibiting growth of cancer cells that expresses 213P1P11; generating a
 CC mammalian immune response; detecting the presence of 213P1P11-related
 CC protein or polynucleotide in a sample; and detecting the presence of
 CC cancer in an individual. The compositions, molecules and methods are
 CC useful for detecting and treating cancer, e.g. pancreatic or rectal
 CC cancer. This is the amino acid sequence of a human 213P1P11 peptide
 CC epitope bearing a human leukocyte antigen (HLA) class I or class II motif
 CC useful in the creation of an HLA vaccine to modulate 213P1P11.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -1- FUNCTION: Has an oostatic activity. Inhibits trypsin biosynthesis
in the midgut which indirectly reduces the vitellogenin
concentration in the hemolymph resulting in inhibition of oocyte
development.
CC -1- DEVELOPMENTAL STAGE: Synthesized and released from follicular
epithelium 18-24 hours after a blood meal. Synthesis peaks at 36
hours and stops at 56 hours.

  "Nucleotide sequence analysis of the ribosomal S12 gene of
  Mycobacterium intracellulare.";
  Nucleic Acids Res. 21:1039-1039(1993).
RT FUNCTION: One of the primary rRNA binding proteins, it binds
  directly to 16S rRNA where it nucleates assembly of the head
  domain of the 30S subunit. It is located at the subunit interface
  close to the decoding center, probably blocks exit of the E-site
  tRNA (by similarity).
CC -1- SUBUNIT: Part of the 30S ribosomal subunit. Contacts proteins S9
  and S11 (by similarity).
CC -1- SIMILARITY: Belongs to the ribosomal protein S7P family.
CC This Swiss-Prot entry is copyright. It is produced through a collaboration
  between the Swiss Institute of Bioinformatics and the EMBL outstation -

RA Mross G.A., Doolittle R.F.;
RT "Amino acid sequence studies on aridodacty fibrinopeptides."
RL Arch. Biochem. Biophys. 122:674-684 (1967).
CC -1- FUNCTION: Fibrinogen has a double function: yielding monomers that
CC polymerize into fibrin and acting as a cofactor in platelet
CC aggregation.
CC -1- SUBUNIT: Heterohexamer; disulfide linked. Contains 2 sets of 3
CC nonidentical chains (alpha, beta and gamma). The 2 heterotrimers
CC are in head to head conformation with the N-termini in a small
CC central domain (by similarity).
CC -1- DOMAIN: A long coiled coil structure formed by 3 polypeptide
CC chains connects the central module to the C-terminal domains
CC (distal nodules). The long C-terminal ends of the alpha chains
CC fold back, contributing a fourth strand to the coiled coil
CC structure.
CC -1- PTM: Conversion of fibrinogen to fibrin is triggered by thrombin,
CC which cleaves fibrinopeptides A and B from alpha and beta chains,
CC and thus exposes the N-terminal polymerization sites responsible
CC for the formation of the soft clot.

RA Blomback B., Grondahl N.J.;
RT "Studies on fibrinopeptides from mamale."
RL Acta Chem. Scand. 19:1789-1791 (1965).
CC -1- FUNCTION: Fibrinogen has a double function: yielding monomers that
CC polymerize into fibrin and acting as a cofactor in platelet
CC aggregation.
CC -1- SUBUNIT: Heterohexamer; disulfide linked. Contains 2 sets of 3
CC nonidentical chains (alpha, beta and gamma). The 2 heterotrimers
CC are in head to head conformation with the N-termini in a small
CC central domain (by similarity).
CC -1- DOMAIN: A long coiled coil structure formed by 3 polypeptide
CC chains connects the central module to the C-terminal domains
CC (distal nodules). The long C-terminal ends of the alpha chains
CC fold back, contributing a fourth strand to the coiled coil
CC structure.
CC -1- PTM: Conversion of fibrinogen to fibrin is triggered by thrombin,
CC which cleaves fibrinopeptides A and B from alpha and beta chains,
CC and thus exposes the N-terminal polymerization sites responsible
CC for the formation of the soft clot.

Novel high molecular weight Dermatophagoides nucleic acid polypeptides

used to modify an animals' hypersensitivity to mite allergens.

Claim 3; Page 69; 154pp; English.

Sequences AAV52510-Y52522 represent proteolytic fragments of

Dermatophagoides farinae high molecular weight mite allergen protein (HMW

-map) composition. The HMW-map composition was isolated from a D. farinae

homogenate by gel filtration, with each fraction being analysed for the

presence of proteins that bound to IGE present in mite-allergic dog

antiserum. The HMW-map composition comprises mapA (a 109 kd protein) and

mapB (98 kd). Mite allergenic proteins and peptides, and nucleic acids

encoding them, may be used in therapeutic compositions to modify an

animal's hypersensitivity reaction to mite allergens. Animals that may be

treated include mammals and birds, especially felines, canines, equines,

humans, other pets, and work or domestic animals. The proteins or

fragments may also be used to diagnose allergies via a skin test. The

proteins and peptides can also be used to raise antibodies, which have a

variety of potential uses. For example, they can be used as vaccines to

passively immunise animals against dust mite hypersensitivity, as

positive controls in test kits and as tools to recover desired dust mite

allergens from a mixture of proteins

(HESK-) HESKA CORP.

Mccall CA, Hunter SW, Weber ER;

WPI; 2002-351888/38.

New mite allergenic protein isolated from Dermatophagoides, designated

Der HMW-map protein, useful as a vaccine for treating mite allergy.

Claim 12; Page 70; 161pp; English.

The invention relates to an isolated mite allergenic protein of

Dermatophagoides, designated Der HMW-map protein, and its related nucleic

acid. The Der HMW-map protein is useful for eliciting an immune response

against Der HMW-map protein. The protein or a reagent comprising a non-

proteinaceous epitope is useful for identifying an animal (e.g., dog,

cat) susceptible to or having an allergic response to a mite. A

therapeutic composition is useful for desensitising a host animal to an

allergic response to a mite. The DNA and protein can be used in the

detection of anti-Der HMW-map antibodies in animal fluids, and inhibition

of immunoglobulin (Ig) E or Der HMW-map protein activity associated with a

disease. Antibodies that bind to Der HMW-map are useful for inhibiting

binding of proteins to IGE, to prevent immunocomplex formation, thus

reducing hypersensitivity responses to mite allergens, and as vaccines

against mite allergen hypersensitivity. Sequences AAU96314-AAU96342

represent Der HMW-map polypeptides of the invention

 PT Erythropoietin receptor binding peptide - useful for treating disorders
 PT characterised by deficiency of EPO, or low or defective red blood cell
 PT population.
 XX
 PS Disclosure; Page 26; 95pp; English.
 XX
 CC The invention describes a peptide of 10-40 amino acid residues which
 CC binds to erythropoietin (EPO) receptor and which includes the amino acid
 CC sequence Cys-Xaa1-Xaa2-Gly-Pro-Xaa3-Thr-Tyr-Xaa4-Cys, where Xaa1 = Arg,
 CC His, Leu or Trp, Xaa2 = Met, Phe or Ile, Xaa3 = 1 of the 20 genetically
 CC coded L-amino acids, and Xaa4 = Asp, Glu, Ile, Leu or Val. Optionally,
 CC the peptide may be cyclised or dimerised. The peptide can be used to
 CC treat a patient having a disorder characterised by a deficiency of EPO or
 CC a low or defective red blood cell population. It can be used to treat end
 CC stage renal failure or dialysis; anaemia associated with AIDS; autoimmune
 CC disease, chronic inflammatory diseases or malignancy; beta-thalassemia;
 CC cystic fibrosis; early anaemia of prematurity; spinal cord injury; acute
 CC blood loss; aging; and neoplastic disease states accompanied by abnormal
 CC erythropoiesis. The peptide can also be used as reagents for detecting
 CC EPO receptors on living cells, in biological fluids, in tissue
 CC homogenates, etc. Sequences AY6352-548 are representative peptides
 CC falling within the above peptide motif and isolated during the affinity
 CC selection process

 DR A peptide useful for treating a IGB-mediated disease or disorder in a
 PT host e.g. allergic rhinitis, asthma, which competes with immunoglobulin B
 PT for binding to high affinity IGB receptor in an in vitro assay.
 XX
 PS Example 1; Page 79; 328pp; English.
 XX
 CC The invention relates to a peptide which competes with immunoglobulin
 CC (Ig) B 134 comprising a sequence (S1), for binding the high affinity IGB
 CC receptor (ReceptorRI) in an in vitro assay and having a formula given in
 CC the specification. Also included are a fusion protein comprising the
 CC peptide, a pharmaceutical composition (C) comprising the peptide,
 CC designing a compound that mimics the three-dimensional surface structure
 CC of the peptide, a compound with a solvent accessible surface that mimics
 CC the solvent accessible surface defined by the side chains of residues (R)
 CC Pro4, Phe6, Pro16, Cys3, Cys7, Cys15 and Cys19 of IGB134, a peptide with
 CC structural coordinates as given in the specification, selecting a peptide
 CC mimetic which binds to ReceptorRI and blocks binding of IGB and a
 CC peptide mimetic which mimics the coordinates of IGB134 residues (R). (C)
 CC is useful for inhibiting the binding of IGB to high affinity IGB receptor
 CC (ReceptorRI). Peptides of the formula given in the specification are
 CC useful for inhibiting the binding of an IGB to high affinity IGB
 CC receptor. The peptide is useful for selecting a molecule which blocks the
 CC interaction of IGB with high affinity IGB receptor. The peptide is also
 CC useful for inhibiting the activation of high affinity IGB receptor. The
 CC peptide is useful for treating an IGB-mediated disease or disorder in a
 CC host. (C) is useful in research, diagnostic, therapeutic and prophylactic
 CC methods. The peptide is also useful for inhibiting IGB-mediated or
 CC associated processes such as IGB-dependent activation and degranulation
 CC of mast cells and basophils, as well as consequent release of
 CC inflammatory mediators such as histamine. (C) is useful for treating
 CC allergic rhinitis, asthma (e.g. allergic asthma), atopic dermatitis,
 CC urticaria-angioedema, parasitic infection, IGB myeloma, immune-related
 CC disorders, inflammatory disorders, diabetes mellitus, IGB-mediated
 CC gastrointestinal inflammatory disease, immune rejection of grafts,
 CC reperfusion injury, stroke, myocardial infarction, atherosclerosis, acute
 CC lung injury, haemorrhagic shock, burn, septic shock, acute tubular
 CC necrosis, endometriosis, degenerative joint disease and pancreatitis. The
 CC present sequence is a peptide of the invention expressed from a phage
 CC display library

PT New conjugate used for treating aberrant cellular activation, migration,
PT proliferation or survival condition such as cancer, comprises drug and
PT substrate for protein or lipid kinase linked to protein, optionally by
PT non-releasable linker.
XX
PS Disclosure; SEQ ID NO 795; 407pp; English.
XX
CC The invention relates to a conjugate (I) comprising a drug and a
CC substrate for a protein kinase or a lipid kinase non-releasably linked to
CC it, optionally by a non-releasable linker. Also included are preparing
CC pacitaxel C10 carbamate of formula (8a) (which comprises reacting a
CC pacitaxel compound of formula (5a) with a carbodiimide compound and
CC reacting the obtained compound of formula (6a) with an amine of formula
CC X, all formulae given in the specification), a pharmaceutical composition
CC (PCI) comprising (I) and a carrier, an article (comprising packaging
CC material, (I) or its derivatives, for treatment/prevention/amelioration
CC of one or more symptoms (associated with aberrant cellular activation,
CC migration, proliferation or survival (ACMPs) and a label that indicates
CC that (I) is used for treatment, prevention or amelioration of one or more
CC symptoms associated with ACMPs), and a peptide comprising an kinase
CC substrate peptide. The conjugate has improved cytotoxic selectivity index
CC as compared to an unconjugated drug. The conjugate is useful for treating
CC conditions caused by ACMPs characterized by undesirable or aberrant
CC activation, migration, proliferation or survival of tumor cells,
CC endothelial cells, B cells, T cells, macrophages, neutrophils, other
CC eosinophils, basophils, monocytes, platelets, fibroblasts, other
CC connective tissue cells, osteoblasts, osteoclasts and progenitors of
CC these cell types. The ACMPs condition is a cancer, coronary restenosis,
CC osteoporosis, chronic inflammation or autoimmune disease. The
CC autoimmune disease is rheumatoid arthritis, asthma, psoriasis,
CC inflammatory bowel disease, systemic lupus erythematosus, systemic
CC dermatomyositis, inflammatory ophthalmic diseases, autoimmune hematologic
CC disorders, multiple sclerosis, vasculitis, idiopathic nephrotic syndrome,
CC transplant rejection or graft versus host disease. The cancer is non-
CC small cell lung cancer, head squamous cancer, neck squamous cancer,
CC colorectal cancer, prostate cancer, breast cancer, acute lymphocytic
CC leukemia, adult acute myeloid leukemia, adult non-Hodgkin's lymphoma,
CC brain tumor, cervical cancer, childhood cancer, childhood sarcoma,
CC chronic lymphocytic leukemia, chronic myeloid leukemia, esophageal
CC cancer, hairy cell leukemia, kidney cancer, liver cancer, multiple
CC myeloma, neuroblastoma, oral cancer, pancreatic cancer, primary central
CC nervous system lymphoma, skin cancer or small-cell lung cancer. The
CC cancer is brain stem glioma, cerebellar astrocytoma, cerebral
CC astrocytoma, ependymoma, Ewing's sarcoma, germ cell tumor, Hodgkin's
CC disease, acute myelogenous leukemia, acute lymphoblastic leukemia, liver
CC cancer, medulloblastoma, neuroblastoma, non-Hodgkin's lymphoma,
CC osteosarcoma, malignant fibrous histiocytoma of bone, retinoblastoma,
CC rhabdomyo sarcoma, soft tissue sarcoma, supratentorial primitive
CC neuroectodermal and pineal tumors, visual pathway and hypothalamic
CC glioma, Wilms' tumor or other childhood kidney tumor. The cancer is
CC originated from or has metastasized to the bone, brain, breast, digestive
CC and gastrointestinal system, endocrine system, blood, lung, respiratory

CC system, thorax, musculoskeletal system, or skin. The cancer is selected
CC from breast cancer, lung cancer, prostate cancer, ovarian cancer,
CC esophageal cancer, bladder cancer, hepatoma, neuroblastoma, lymphoma,
CC testicular cancer, renal cancer, leukemia, colorectal cancer and head
CC neck cancer. The conjugate is useful for identifying kinase substrates
CC capable of selectively accumulating in a target system. The conjugate is
CC useful for identifying conjugates capable of exhibiting selective
CC toxicity against a target system. The conjugate is useful for enhancing
CC drug efficiency. The present sequence is kinase substrate peptide useful
CC in the conjugate of the invention.

PT Erythropoietin receptor binding peptide - useful for treating disorders
PT characterised by deficiency of EPO, or low or defective red blood cell
PT population.

P8 Disclosure; Page 23; 95pp; English.

The invention describes a peptide of 10-40 amino acid residues which binds to erythropoietin (EPO) receptor and which includes the amino acid sequence Cys-Xaa1-Xaa2-Gly-Thr-Xaa3-Thr-Tyr-Xaa4-Cys, where Xaa1 = Arg, His, Leu or Trp, Xaa2 = Met, Phe or Ile, Xaa3 = 1 of the 20 genetically coded L-amino acids, and Xaa4 = Asp, Glu, Ile, Leu or Val. Optionally, the peptide may be cyclised or dimerised. The peptide can be used to treat a patient having a disorder characterised by a deficiency of EPO or a low or defective red blood cell population. It can be used to treat end stage renal failure or dialysis; anaemia associated with AIDS, autoimmune disease, chronic inflammatory diseases or malignancy; beta-thalassaemia; cystic fibrosis; early anaemia of prematurity; spinal cord injury; acute

CC blood loss, aging, and neoplastic disease states accompanied by abnormal
 CC erythropoiesis. The peptides can also be used as reagents for detecting
 CC EPO receptors on living cells, in biological fluids, in tissue
 CC homogenates, etc. Sequences AAY6332-548 are representative peptides
 CC falling within the above peptide motif and isolated during the affinity
 CC selection process

PT New isolated antigenic peptides e.g., for G protein-coupled receptors
PT (GPCR), useful for diagnosing and designing drugs for treating conditions
PT in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
PT autoimmune diseases.

PS Claim 1; Fig 2; 523pp; English.

The invention describes antigenic peptides (1) comprising: (a) any one of 1601 sequences (see ABB82019 to ABB83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (1) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for

CC GPCRs and antibodies are useful for diagnosing and designing drugs for
CC creating immune-related diseases, growth-related diseases, cell
CC regeneration-related disease, immunological-related cell proliferative
CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,
CC atherosclerosis, bacterial, fungal, protozoan or viral infections,
CC osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute
CC inflammation, allergies, Crohn's disease, diabetes, graft versus host
CC disease, Parkinson's disease, multiple sclerosis, pain, psoriasis,
CC anxiety, depression, schizophrenia, dementia, mental retardation, memory
CC loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension,
CC hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or
CC any other disorder in which GPCRs are involved. The antibodies may be
CC used in immunoassays and immunodiagnoses. AB242523 to AB242869 encode
CC GPCR proteins given in ABP81675 to ABP82018, which are used in the
CC exemplification of the present invention

 PT New modular recombinatorial display libraries comprising a plurality of
 PT DNA molecules, useful for isolating binding polypeptides for a target
 PT molecule.
 PS Example 2; SEQ ID NO 55; 53bp; English.
 XX
 CC The present invention describes a library of display vectors comprising a
 CC plurality of DNA molecules that comprise a general structure: R1-2-R2,
 CC where R1 and R2 are independently variable regions; and Z is a constant
 CC region that includes a cleavage site for a restriction endonuclease. Also
 CC described: (1) obtaining a binding peptide, comprising: (a) selecting for
 CC phage in the above library, where a displayed peptide binds to a target
 CC of interest; (b) obtaining RF DNA for the selected phage; (c) cleaving
 CC the library RF DNA at the first and second restriction sites; (d) mixing
 CC the selected RF DNA fragments and the library RF DNA fragments; (e)
 CC ligating the mixed fragments; (f) introducing the ligated fragments into
 CC cells, such that phage displaying a new library are produced; and (g)
 CC selecting and sequencing binding phage from the new library, and so
 CC obtaining the binding peptide; (2) producing a modular phage display
 CC library; and (3) producing a recombinatorial phage display library. The
 CC methods are useful for obtaining a binding peptide, producing a modular
 CC phage display library, and producing a recombinatorial phage display
 CC library. The library of display vectors is useful in isolating binding
 CC polypeptides for a target molecule. The present sequence is used in the
 CC exemplification of the present invention.

 XX
 PT New polypeptide that binds to vascular endothelial growth factor receptor
 PT -2, useful for diagnosis and treatment of e.g. tumors, and its conjugates
 PT with therapeutic or imaging agents.
 XX
 PS Claim 79; SEQ ID NO 220; 350bp; English.
 XX
 CC This invention relates to novel peptides useful for detecting and
 CC targeting primary receptors on endothelial cells that bind vascular
 CC endothelial growth factor (VEGF). Specifically, it refers to detecting
 CC the receptor tyrosine kinase identified as VEGF-2, which is also known as
 CC kinase domain region (KDR) and foetal liver kinase-1 (flk-1). The present
 CC invention describes the involvement of the VEGF/KDR complex as important
 CC in angiogenesis, and that VEGF/KDR complex binding or KDR binding
 CC polypeptides can be used for imaging neoplastic tumours. Furthermore,
 CC these compositions are useful for targeting radiotherapeutics to specific
 CC sites for treating diseases associated with KDR activation, which include
 CC malaria, HIV, SIV infection, simian haemorrhagic fever virus and
 CC enterohaemorrhagic Escherichia coli infection. Accordingly, these
 CC compositions exhibit various activities including protozoacidal, anti-
 CC HIV, virucidal, antibacterial and cytostatic. This peptide sequence is a
 CC high affinity binding peptide of KDR and the VEGF/KDR complex, part of
 CC the MTN13 peptide library of the invention.

 PT Novel isolated polypeptide having ability to bind to kinase domain region
 PT or vascular endothelial growth factor/kinase domain region complex,
 PT useful in inhibiting vascular endothelial growth factor activation of
 PT kinase domain region.
 XX
 PS Claim 11; SEQ ID NO 220; 470pp; English.
 XX
 CC This invention relates to novel isolated peptides that can bind to a
 CC kinase domain region (KDR) or vascular endothelial growth factor
 CC (VEGF)/KDR complex. Specifically, it refers to polypeptides, peptide
 CC dimers and multimeric complexes that bind with high affinity to KDR (also
 CC known as the VEGF receptor 2 (VEGFR2) and foetal liver kinase 1 (flk-1))
 CC or the VEGF/KDR complex, and as such due to the involvement of VEGF and
 CC KDR in angiogenesis these binding peptides can be used for imaging
 CC important sites of angiogenesis, as well as in targeting therapeutics to
 CC such sites. The present invention describes these peptides as useful for
 CC promoting or inhibiting angiogenesis and pathogenic conditions associated
 CC thereof such as neoplastic tumours. Furthermore, these binding peptides
 CC are useful for treating malaria, HIV infection, SIV infection, simian
 CC haemorrhagic fever virus infection and enterohaemorrhagic Escherichia
 CC coli infection. Accordingly, they exhibit cytotoxic, antiangiogenic,
 CC antimalarial, anti-HIV, virucidal and antibacterial activities. In
 CC particular, they inhibit VEGF activation of its receptor (i.e. KDR), and
 CC enable efficient detection, imaging and localisation of activated
 CC endothelial cells exhibiting upregulated KDR expression. This peptide
 CC sequence is a high affinity KDR and VEGF/KDR cyclic binding peptide
 CC belonging to the secondary MTN13 library of the invention.

 PT treating patient having disorder characterised by EPO deficiency.
 XX
 PS Disclosure; Fig 9; 110pp; English.
 XX
 CC The present peptide is a specific example of a claimed generic monomer
 CC subunit of an erythropoietin (EPO) receptor binding dimer, which
 CC comprises 2 EPO receptor binding monomers of 10 to 40 amino acids, and
 CC activates or improves the bioactivity of the EPO cell surface receptor.
 CC The dimer can be used to treat disorders resulting from EPO deficiency by
 CC improving the activity of its cell surface receptor, e.g. end stage renal
 CC failure/dialysis, anaemia associated with AIDS or chronic inflammatory
 CC diseases such as rheumatoid arthritis and chronic bowel inflammation and
 CC autoimmune disease. It can also be used to boost the red cell count of a
 CC patient prior to surgery or as pretreatment to transfusion. The dimer
 CC peptide exhibits increased biological potency in vitro and in vivo
 CC relative to its component monomeric agonists. Dimerisation may also
 CC convert cell surface receptor antagonists into agonists

XX Synthesizing peptide dimer useful as erythropoietin receptor agonist by
XX binding linking group with functional groups as initiation sites for
XX peptide synthesis to support and synthesizing peptide segments.
XX
XX Disclosure; Fig 1; 43pp; English.
XX
XX The present sequence for potential R1 and R2 peptide #41 can be used to
XX form a peptide dimer that binds and activates the erythropoietin receptor
XX (EPO-R). Various possible peptide sequences for R1 and R2 (AAU05301-
XX AAU05393) are described in the present invention. Also described is a
XX method for synthesizing such peptide dimers which act as EPO-R agonists.
XX The method is useful for synthesizing peptide dimers which are useful, in
XX vitro, as tools for understanding the biological role of EPO, in the
XX development of other compounds that bind to EPO-R, as commercial research
XX reagents for various medical research and diagnostic applications, for
XX detecting EPO receptors on living cells, for treatment of disorders
XX associated with a deficiency of EPO, such as end-stage renal
XX failure/dialysis, anemia associated with AIDS and chronic inflammatory
XX diseases, autoimmune diseases and malignancies, and for boosting the red
XX blood count of a patient prior to surgery

XX New nucleic acid molecule encoding nucleocapsid- or spike-gene protein of

PT a human Severe Acute Respiratory Syndrome (hSARS) virus, useful for

PT diagnosing and treating SARS.

XX Example; SEQ ID NO 1834; 200pp; English.

PS The present invention relates to novel human Severe Acute Respiratory

CC Syndrome (hSARS) viral nucleic acid and protein sequences derived from a

CC hSARS virus having China Center for Type Culture Collection Deposit

CC Accession No. CCTCC-V200303. The present invention also relates to novel

CC nucleic acid molecules (I; ADT41483 or ADT41485) encoding a nucleocapsid-

CC (N) or spike (S)-gene protein of a hSARS virus. Also disclosed are

CC methods for detecting the presence of a N- or S-gene of the hSARS virus

CC or of the protein in a biological sample and identifying a subject

CC infected with the hSARS virus. The hSARS virus, nucleic acid and protein

CC sequences are useful as vaccines for diagnosing or treating SARS. They

CC are also useful in clinical and scientific research applications. The

CC hSARS virus genome (ADT30027) was obtained and the amino acid sequences

CC of all three reading frames were deduced from the complementary strand.

CC ADT40120 is the full-length protein encoded by the first reading frame of

CC the complementary strand and ADT40121-ADT40601 are the peptides from the

CC first reading frame protein. ADT40602 is the full-length protein encoded

CC by the second reading frame of the complementary strand and ADT40603-

CC ADT40976 are the peptides from the second reading frame protein. ADT40977

CC is the full-length protein encoded by the third reading frame of the

CC complementary strand and ADT40978-ADT41482 are the peptides from the

CC third reading frame protein.

XX New isolated nucleic acid molecule useful for detecting, treating,

PT ameliorating, or preventing the virus causing severe acute respiratory

PT syndrome in humans using a real-time quantitative polymerase chain

XX Example; SEQ ID NO 1834; 183pp; English.

PS The invention relates to an isolated nucleic acid molecule consisting

CC essentially of, and/or hybridizes under stringent conditions to a fully

CC defined nucleotide sequence of 16-25 base pairs (bp); SEQ ID NO: 2471-

CC 2476), or its complement. The methods and compositions of the present

CC invention are useful for the detection of the virus causing Severe Acute

CC Respiratory Syndrome (SARS) in humans using a real-time quantitative

CC polymerase chain reaction (PCR) assay. They can also be used in treating,

CC ameliorating, managing or preventing SARS. This sequence corresponds to a

CC partial SARS protein sequence from the complementary reading frame 2.

 CC This invention describes a novel peptide which is an erythropoietin
 CC receptor (EPO-R) activator. The peptide forms a dimer comprising a
 CC linking moiety connecting two peptide chains composed of ADU91861. The N-
 CC terminal of the peptide is acetylated. The EPO-R activator further
 CC comprises at least one water soluble polymer, preferably polyethylene
 CC glycol (PEG) covalently bound to the peptide and a spacer moiety. The
 CC products of the invention are used for treating disorders associated with
 CC deficiency of erythropoietin or low or defective red blood cell
 CC population, end stage renal failure or dialysis, anemia associated with
 CC AIDS, autoimmune disease or malignancy, beta-thalassemia, cystic
 CC fibrosis, early anemia of prematurity, anemia associated with chronic
 CC inflammatory disease, spinal cord injury, acute blood loss, aging and
 CC neoplastic disease states accompanied by abnormal erythropoiesis. The
 CC peptide compounds are potent agonists of erythropoietin receptor and have
 CC nephrotropic, antianemic, immunosuppressive, CNS-Gen., neuroprotective,
 CC respiratory-Gen., antiinflammatory, vulnerary, nootropic, cyostatic and
 CC hemostatic activity. This sequence represents a peptide which acts as an
 CC erythropoietin receptor (EPO-R) agonist.

XX
XX Erythropoietin receptor binding peptide - useful for treating disorders
XX characterised by deficiency of EPO, or low or defective red blood cell
XX population.
XX
XX Disclosure; Page 23; 95pp; English.
XX
XX The invention describes a peptide of 10-40 amino acid residues which
XX binds to erythropoietin (EPO) receptor and which includes the amino acid
XX sequence Cys-Xaa1-Xaa2-Gly-Pro-Xaa3-Thr-Trip-Xaa4-Cys, where Xaa1 = Arg,
XX His, Leu or Trp, Xaa2 = Met, Phe or Ile, Xaa3 = 1 of the 20 genetically
XX coded L-amino acids, and Xaa4 = Asp, Glu, Ile, Leu or Val. Optionally,
XX the peptide may be cyclised or dimerised. The peptide can be used to
XX treat a patient having a disorder characterised by a deficiency of EPO or
XX a low or defective red blood cell population. It can be used to treat end
XX stage renal failure or dialysis; anemia associated with AIDS, autoimmune
XX disease, chronic inflammatory diseases or malignancy; beta-thalassemia;
XX cystic fibrosis; early anaemia or prematurity; spinal cord injury; acute
XX blood loss; aging; and neoplastic disease states accompanied by abnormal
XX erythropoiesis. The peptides can also be used as reagents for detecting
XX EPO receptors on living cells, in biological fluids, in tissue
XX homogenates, etc. Sequences AAY26352-548 are representative peptides
XX falling within the above peptide motif and isolated during the affinity
XX selection process

 DR
 XX Hepatocyte growth factor receptor (cmet) binding polypeptide or
 PT multimeric peptide construct, useful for diagnostic imaging of sites of
 PT cellular proliferation and/or angiogenesis, and for treating cancer.
 XX
 PS Claim 7, SEQ ID NO 57, 174pp; English.
 XX
 CC The invention relates to a novel polypeptide or multimeric peptide
 CC construct (I) which binds hepatocyte growth factor receptor (cmet) or a
 CC complex comprising cmet and hepatocyte growth factor (HGF). (I) is useful
 CC for detecting cmet or a complex of cmet and HGF in an animal or human
 CC subject which involves providing (I), where (I) is labelled,
 CC administering to the subject the labelled (I), and detecting labelled (I)
 CC in the subject. The label is radioactive or paramagnetic. (I) is useful
 CC for purifying cmet or a cmet and HGF complex from a solution containing
 CC it which involves contacting the solution with at least one (I), and
 CC separating the polypeptide or multimeric polypeptide from the solution.
 CC (M1) is useful for treating conditions involving activation of cmet. The
 CC disease is a solid tumor chosen from breast, thyroid, glioblastoma,
 CC prostate, malignant mesothelioma, colorectal, hepatocellular,
 CC hepatobiliary, renal, osteosarcoma and cervical tumors. (I) is useful for
 CC diagnostic imaging of sites of cellular proliferation and/or
 CC angiogenesis, thus useful in diagnosis of such hyperproliferative-related
 CC and/or angiogenesis-related disorders. (I) is useful for targeting
 CC therapeutic agents or delivering vehicles for therapeutics to sites of
 CC hyperproliferation and/or angiogenesis or other tissue expressing cmet.
 CC (I) is useful for detection and/or imaging of cmet in vitro or in vivo.
 CC (I) is useful for treating cancer. (I) is used in gene therapy for
 CC treating hyper proliferative disorders. cmet binding peptides were
 CC synthesized on a solid phase matrix using 9-fluorenylmethoxycarbonyl
 CC protocols. The peptides were purified with reverse chromatography. This
 CC sequence corresponds to a peptide of the invention.

XX Glutathione-S-transferase (GST) binding peptides and a process for their
 PT preparation for GST-pai inhibitors without substantial adverse reaction.
 PT

PS Claim 2; Page 2; 6pp; Japanese.

XX The invention discloses glutathione-S-transferase (GST) pI inhibitory
 CC peptides which are useful as drug metabolising enzymes. The GST binding
 CC proteins are prepared by culture of a transformant obtained from GST
 CC plasmid and purification of resultant GST binding peptide,
 CC preparation of a peptide library, recovery of a phage expressing GST
 CC binding peptide, purification of the phage from single plaque and
 CC determination of the peptide sequence of GST binding phage. The agents
 CC overcome drug resistance of cancers. The peptides improvement of drug
 CC sensitivity of cancer cells providing elevated cytotoxic effect. The
 CC sequence presented is a GST binding peptide of the invention.

XX Novel double-chimeric beta2-microglobulin polynucleotide useful for
 PT treating cancer, comprising sequence encoding polypeptide capable of
 PT presentation of antigenic peptides.

PS Claim 16; SEQ ID NO 11; 86pp; English.

XX The present invention describes a double-chimeric beta 2-microglobulin
 CC polynucleotide (I) comprising a sequence encoding a polypeptide (II) that
 CC is capable of high level presentation of antigenic peptides on antigen-
 CC presenting cells, where (II) comprising a beta 2-microglobulin molecule
 CC that is linked through its carboxyl terminal to a polypeptide stretch
 CC which allows the anchorage of the beta 2-microglobulin molecule to the
 CC cell membrane, and through its amino terminal to an antigenic peptide
 CC comprising major histocompatibility complex (MHC) class I epitope. The
 CC antigenic peptide is not related to an autoimmune disease. Also
 CC described: (1) an expression vector (III) comprising (I) and is a
 CC recombinant viral vector; (2) an antigen-presenting cell (IV) transfected
 CC with (I); (3) a DNA vaccine (V) comprising a (I) or (III); (4) a cellular
 CC vaccine (VI) for the prevention or treatment of cancer comprising (IV)
 CC which express (I) or tumour cells transfected with (I), where the cells
 CC have been pulsed with an antigenic peptide derived from one tumour
 CC associated antigen; and (5) a pharmaceutical composition (VII) comprising
 CC (I), (III) or (IV) as an active ingredient and carrier. (I) has
 CC cytotoxic, antibacterial, virucide, fungicide and protozoacide
 CC activities, and can be used in vaccines, and for inducing cytotoxic T
 CC lymphocytes. (I) and (V) can be used for the prevention or treatment of
 CC cancer or for a disease caused by a pathogenic organism. (VI) is useful
 CC for prevention or treatment of cancer, or disease caused by a pathogenic
 CC organism, where (VI) presents one tumour associated antigen, or
 CC pathogenic antigen. (VI) is also useful for immunising a mammal against a
 CC tumour-associated antigen or a disease caused by a pathogenic organism,
 CC which involves immunising the mammal with (VI). (I) is useful for
 CC inducing class I-restricted CTL response in a mammal. The present
 CC sequence is used in the exemplification of the present invention.

PT Cyclic integrin binding peptides - used to inhibit integrin-dependant
 PT cell migration.
 XX
 PS Example 3; Page 24; 59pp; English.
 XX
 CC The present sequence invention describes cyclic integrin binding peptides
 CC comprising the amino acid sequence RKK, preferably RKKH. Also described
 CC in the present invention are: (1) a cyclic peptide comprising the amino
 CC acid sequence XIRKKHX2Xn where X is any amino acid and n=1-4; (2) a
 CC cyclic integrin binding peptide comprising the amino acid sequence
 CC CTRKKHNC or CTRKKHNAQC; (3) a pharmaceutical composition comprising one
 CC of the above integrin binding peptides; and (4) a binding assay for
 CC identifying integrin binding agents, comprising: (a) biotinylating the
 CC integrin binding agent to be assayed; (b) reacting the biotinylated agent
 CC with an immobilised recombinant alpha 2i domain or domain-derived
 CC peptides in conditions suitable for binding; (c) washing the solid
 CC support carrying the bound agent; (d) adding a labelled biotin-binding
 CC agent; and (e) detecting any bound integrin binding agent. The integrin
 CC binding peptides can be used for inhibiting integrins. They can also be
 CC used for inhibiting integrin-dependent cell migration, such as associated
 CC with cancer, cardiovascular disease or a periodontitis condition. They can
 CC also be used for inhibiting the adhesion of platelets to collagen or
 CC collagen induced platelet aggregation in a patient. The present sequence
 CC represents a peptide from the present invention

CC heart defects, etc), neovascularisation disorders, wound healing and
 CC epithelial cell proliferation, neurological diseases (such as Alzheimer's
 CC disease, Parkinson's disease, Huntington's disease, mania, dementia,
 CC etc), infectious diseases caused by virus, bacteria, fungi, etc. The
 CC present sequence represents the amino acid sequence of a novel human
 CC secreted protein associated polypeptide.

XX
XX CC invention (see AAM13872, and AAM13884-W13887). The peptides were all
XX
XX CC isolated from different Bacillus thuringiensis (B.t.) isolates. B.t. is a
XX
XX CC gram-positive, spore forming, soil bacterium, characterised by parasporal

```

CC crystalline protein inclusions. These proteins can be highly toxic to
 CC pests, and have been used to produce insect resistant plants. The
 CC previously isolated B.t. delta-endotoxins were mainly active against
 CC lepidopteran insects, however the proteins of the invention are active
 CC against hymenopteran insects. The sequences represented by AAM13888 and
 CC AAM13871 represent the generic formulae for the toxins of the invention.
 CC As the toxins of the invention are active against hymenopteran pests,
 CC they can be used for the biological control of ants, particularly pharaoh
 CC ants (Monomorium pharaonis) (Updated on 25-MAR-2003 to correct PR
 CC field.) (Updated on 17-OCT-2003 to standardise OS field)

XX Bacillus thuringiensis toxin proteins - useful for insecticidal activity

PT against hymenopteran pests i.e. ants.

XX Example 2; Col 19; 65pp; English.

CC This sequence is a fragment of a *Bacillus thuringiensis* (B.t.) toxin of
 CC the invention. The toxins are lethal to a hymenopteran pest. The DNA
 CC sequences are useful for the recombinant production of B.t. toxins. These
 CC toxins in turn are useful as pesticides against hymenopteran (ant) pests,
 CC especially fire, carpenter, argentine and pharaoh ants. The toxins are
 CC paraaporal crystalline protein inclusions that are highly specific
 CC to pests. The toxins are highly specific against ants, rather than e.g.
 CC toxic chemicals used as insecticides which can be harmful to humans and
 CC the environment in general

XX New *Bacillus thuringiensis* toxins with activity against hymenopteran

PT pests such as fire ants and carpenter ants, conform to a specific generic

PT formula and have a specific amino acid sequence.

XX Example 2; Col 20; 67pp; English.

CC The present invention relates to novel *Bacillus thuringiensis* toxins with

CC hymenopteran activity. Preparations containing protein from *Bacillus*

CC *thuringiensis* were tested for toxicity to ants. The N-terminal amino

CC acids of toxic proteins were then sequenced. The present sequence is an

CC internal peptide of the 65B protein. These sequences were used to design

CC oligonucleotide probes. The probes were used to clone ant-active toxin

CC genes. The toxic proteins can be used to control pests such as fire ants,

CC carpenter ants, argentine ants and pharaoh ants. The proteins can also be

CC used for producing transgenic plants that are resistant to attack by

CC ants. The proteins are a safe and effective biological control agent

XX
XX Bacillus thuringiensis isolate encoding a toxin active against nematodes.
DR
XX
XX Claim 2; Page 47; 47pp; English.
XX
XX The invention relates to a Bacillus thuringiensis isolate (I) active
CC against nematodes, selected from strains PS167P, PS158D5, PS169B,
CC PS177F1, PS177G, PS204G4, and PS204G6. (I) comprises a toxin encoded by
CC (II). Contacting nematodes with (I), where the DNA (II) has been
CC transformed into a plant or other host cell, may be used to control
CC nematodes. In addition, administering a toxin, from a wild-type Bacillus
CC thuringiensis DNA, to a host harbouring a fluke, or directly to a fluke
CC may also be useful for controlling flukes. The present sequence
CC represents an internal amino acid sequence of B. thuringiensis PS63B, a
CC nematode-active delta-endotoxin as described in the invention

XX New composition comprising a substance that modulates the structure of
PT proteins and polynucleotides, useful for therapeutic, prognostic and
PT diagnostic reagents for eliciting cellular or humoral immune response in
PT cancer patients.
XX
XX Claim 13; Page 468; 1021pp; English.
XX
XX The present invention relates to novel human cancer-related genes and
CC proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and
CC proteins are useful for eliciting a humoral or cellular immune response.
CC The genes are useful as probes and primers for the amplification and/or
CC detection of genes, mRNAs or their fragments, as reagents for the
CC diagnosis and/or prognosis of cancer, as coding sequences capable of
CC directing the expression of the protein, as tools for modulating or
CC inhibiting the expression of genes and/or translation of transcripts, and
CC as therapeutic agents. The proteins and peptides are useful as
CC therapeutic, prognostic and diagnostic reagents for cancer. The present
CC sequence is a human leukocyte antigen (HLA) peptide, used in an example
CC from the invention

XX
CC The present invention describes an isolated salivary polypeptide (I), of
CC Phlebotomus papatasi. Also described: (1) an isolated nucleic acid (II)
CC encoding (I); (2) an isolated fragment (III) of (II), where the fragment
CC encodes the polypeptide fragment specific for a polypeptide such as
CC Phlebotomus papatasi salivary polypeptide (PSP) 12, PSP14, PSP15,
CC PSP30, PSP32, PSP36, PSP42 or PSP44; (3) an isolated antigenic or
CC immunogenic fragment (IV) of (I); (4) a nucleic acid (V) that hybridises
CC under stringent conditions to (II); (5) a vector (VI) comprising (II) or
CC (III); and (6) a composition (VII) comprising (I) or its fragment, (IV)
CC or (VI), and a pharmaceutically acceptable carrier. (I) has protozoacide
CC and immunostimulant activities, and can be used in vaccines. (VII) is
CC useful for producing an immune response in a subject or for preventing
CC Leishmaniasis in a subject. (II) is also useful for preventing
CC Leishmaniasis in a subject. (VII) is useful as a vaccine. ACC79987 to

 XX
 CC The invention comprises a vaccine composition that consists of isolated
 CC inverted microsomes from an animal cell (or its membrane fragments), in
 CC association with an externally disposed peptide antigen and a protein of
 CC the MHC. The vaccine composition of the invention is useful for the
 CC prophylaxis or treatment of: infection (e.g. viral, bacterial, yeast,
 CC fungal or protozoal), cancer (e.g. melanoma, lung adenocarcinoma, colon
 CC cancer, breast cancer or leukemia), autoimmune disease (e.g. multiple
 CC sclerosis, rheumatoid arthritis or systemic lupus erythematosus). The
 CC present amino acid sequence represents an HLA class II restricted epitope
 CC derived from a fusion protein.

CC The present invention describes an isolated salivary polypeptide (I), of
 CC Phlebotomus papatasi. Also described: (1) an isolated nucleic acid (II)
 CC encoding (1); (2) an isolated fragment (III) of (II), where the fragment
 CC encodes the polypeptide fragment specific for a polypeptide such as
 CC Phlebotomus papatasi salivary polypeptide (PSP) 12, PSP14, PSP15,
 CC PSP30, PSP32, PSP36, PSP42 or PSP44; (3) an isolated antigenic or
 CC immunogenic fragment (IV) of (1); (4) a nucleic acid (V) that hybridises
 CC under stringent conditions to (II); (5) a vector (VI) comprising (II) or
 CC (III); and (6) a composition (VII) comprising (I) or its fragment, (IV)
 CC or (VI); and a pharmaceutically acceptable carrier. (I) has protozoacide
 CC and immunostimulant activities, and can be used in vaccines. (VII) is
 CC useful for producing an immune response in a subject or for preventing
 CC leishmaniasis in a subject. (II) is also useful for preventing
 CC leishmaniasis in a subject. (VI) is useful as a vaccine. ACC79987 to

PT New peptide comprising specified sequence of amino acid is erythropoietin
PT receptor agonist useful for treating e.g. anemia, beta-thalassemia, renal
PT disorders.
XX
PS Disclosure; SEQ ID NO 147; 83pp; English.
XX
CC This invention describes a novel peptide which is an erythropoietin
CC receptor (EPO-R) activator. The peptide forms a dimer comprising a
CC linking moiety connecting two peptide chains composed of ADU91861. The N-
CC terminal of the peptide is acetylated. The EPO-R activator further
CC comprises at least one water soluble polymer, preferably polyethylene
CC glycol (PEG) covalently bound to the peptide and a spacer moiety. The
CC products of the invention are used for treating disorders associated with
CC deficiency of erythropoietin or low or defective red blood cell
CC population, and stage renal failure or dialysis, anemia associated with
CC AIDS, autoimmune disease or malignancy, beta-thalassemia, cystic
CC fibrosis, early anemia of prematurity, anemia associated with chronic
CC inflammatory disease, spinal cord injury, acute blood loss, aging and
CC neoplastic disease states accompanied by abnormal erythropoiesis. The
CC peptide compounds are potent agonists of erythropoietin receptor and have
CC nephrotropic, anti-neuritic, immunosuppressive, CNS-Gen., neuroprotective,
CC respiratory-Gen., anti-inflammatory, vulnary, nocotropic, cyostatic and
CC hemostatic activity. This sequence represents a peptide which acts as an
CC erythropoietin receptor (EPO-R) agonist.

PT Erythropoietin receptor binding peptide - useful for treating disorders
PT characterised by deficiency of EPO, or low or defective red blood cell
PT population.
XX
PS Disclosure; Page 25; 95pp; English.
XX
CC The invention describes a peptide of 10-40 amino acid residues which
CC binds to erythropoietin (EPO) receptor and which includes the amino acid
CC sequence Cys-Xaa1-Xaa2-Gly-Pro-Xaa3-Thr-Trp-Xaa4-Cys, where Xaa1 = Arg,
CC His, Leu or Trp, Xaa2 = Met, Phe or Ile, Xaa3 = 1 of the 20 genetically
CC coded L-amino acids, and Xaa4 = Asp, Glu, Ile, Leu or Val. Optionally,
CC the peptide may be cyclised or dimerised. The peptide can be used to
CC treat a patient having a disorder characterised by a deficiency of EPO or
CC a low or defective red blood cell population. It can be used to treat end
CC stage renal failure or dialysis; anaemia associated with AIDS, autoimmune
CC disease; chronic inflammatory diseases or malignancy; beta-thalassemia;
CC cystic fibrosis; early anaemia of prematurity; spinal cord injury; acute
CC blood loss; aging; and neoplastic disease states accompanied by abnormal
CC erythropoiesis. The peptides can also be used as reagents for detecting
CC EPO receptors on living cells, in biological fluids, in tissue
CC homogenates, etc. Sequences AA26517-548 are representative peptides
CC falling within the above peptide motif and isolated during the affinity
CC selection process

 for, e.g. treating or preventing hyperglycaemia, obesity and neurological
 disorders, and are optionally formulated with thiazolidinone.
 XX
 PS Example 7; Page 57; 133pp; English.
 XX
 CC The invention relates to the isolation of compounds, especially peptides,
 that: (a) inhibit interaction between an insulin-like growth factor (IGF)
 with any one of its binding proteins (IGFBP), and (b) do not bind to a
 human IGF receptor (hIGFR), e.g. see AAW67476-W67491 and AAW67503-W67565.
 CC The peptides are produced synthetically or are isolated from peptide
 libraries where the encoding sequence is generated so that the resulting
 peptide produced retains its structure in solution. This sequence
 CC represents a peptide isolated from a 98 display peptide library which
 CC binds the IGF-1 binding protein IGFBP-3. The compounds are used to
 CC increase serum and tissue levels of active IGF-1, preferably also to
 CC reduce insulin and plasma growth hormone (GH) secretion, and blood
 CC glucose levels, without direct stimulation of secretion or release of
 CC endogenous GH. Particularly the compounds are used to treat or prevent
 CC hyperglycaemia, obesity-related disorders, neurological, cardiac,
 CC anabolic, renal and immunological diseases

PT brains.

PS Example 4; SEQ ID NO 31644; 650bp + Sequence Listing; English.

XX The present invention provides a number of single exon nucleic acid

CC probes which are derived from genomic sequences expressed in the human

CC brain. They can be used to measure gene expression in brain cell samples,

CC which may enable the diagnosis and improved treatment of nervous system

CC diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia,

CC epilepsy and cancers. The present sequence is a protein encoded by one of

XX the probes of the invention

PT Human genome-derived single exon nucleic acid probes useful for analyzing

PT gene expression in human adult liver.

PS Claim 27; SEQ ID NO 32441; 658bp; English.

XX The invention relates to a single exon nucleic acid probe (SENP) (I) for

CC measuring human gene expression in a sample derived from human adult

CC liver, comprising one of 13109 defined nucleotide sequences given in the

CC specification (or complements/ fragments). The probe hybridizes at high

CC stringency to a nucleic acid molecule expressed in the human adult liver.

CC (I) may be used for predicting, measuring and displaying gene expression

CC in samples derived from human adult liver. The genes identified may be

CC involved in genetic liver diseases such as cirrhosis,

CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is

CC associated with coronary heart disease. ABG47348-ABG59330 represent human

CC liver single exon encoded peptides of the invention. Note: The sequence

CC information for this patent does not appear in the printed specification

CC but was obtained in electronic format directly from WIPO at

CC ftp.wipo.int/pub/published_pct_sequences

 PT Spatially-addressable set of single exon nucleic acid probes, used to
 PT measure gene expression in human lung samples.
 XX
 PS Claim 27, SEQ ID NO 31586; 634bp; English.
 XX
 CC The invention relates to a spatially-addressable set of single exon
 CC nucleic acid probes for measuring gene expression in a sample derived
 CC from human lung comprising single exon nucleic acid probes having one of
 CC 12614 nucleic acid sequences mentioned in the specification, or their
 CC complements or the 12387 open reading frames derived from the 12614
 CC probes. Also included are a microarray comprising the novel set of probes
 CC; the novel set of probes which hybridize at high stringency to a nucleic
 CC acid expressed in the human lung; measuring gene expression in a sample
 CC derived from human lung, comprising (a) contacting the array with a
 CC collection of detectably labeled nucleic acids derived from human lung
 CC mRNA, and (b) measuring the label detectably bound to each probe of the
 CC array; identifying exons in a eukaryotic genome, comprising (a)
 CC algorithmically predicting at least one exon from genomic sequences of
 CC the eukaryote; and (b) detecting specific hybridization of detectably
 CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
 CC having a fragment identical to the predicted exon, the probe is included
 CC in the above mentioned microarray; assigning exons to a single gene,
 CC comprising (a) identifying exons from genomic sequence by the method
 CC above and (b) measuring the expression of each of the exons in several
 CC tissues and/or cell types using hybridization to a single exon
 CC microarray having a probe with the exon, where a common pattern of
 CC expression of the exons in the tissues and/or cell types indicates that
 CC the exons should be assigned to a single gene; a peptide comprising one
 CC of 12011 sequences, mentioned in the specification, or encoded by the
 CC probes/open reading frames (ORF). The probes are used for gene expression
 CC analysis, and for identifying exons in a gene, particularly using human
 CC lung derived mRNA and for the study of lung diseases such as asthma, lung
 CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
 CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
 CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
 CC Pudlak syndrome, sarcoidosis, pulmonary haemorrhoidosis, pulmonary
 CC histiocytosis, lymphangioleiomyomatosis, pulmonary alveolar proteinosis,
 CC Karsenger syndrome, fibrocystic pulmonary dysplasia, primary ciliary
 CC dyskinesia, pulmonary hypertension and hyaline membrane disease. The
 CC present sequence is a peptide/protein encoded by a single exon probe of
 CC the invention. Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic format
 CC directly from WIPO at ftp.wipo.int/pub/published_pat_sequences

 CC insulin-like growth factor analog with altered affinity for IGF-binding
 CC proteins.
 PT
 PS Example 1; Page 44; 136bp; English.
 XX
 CC The present invention relates to a method for treating cartilage
 CC disorders. The method comprises contacting cartilage with an active agent
 CC such as insulin-like growth factor (IGF-1) analog with a binding affinity
 CC preference for IGF binding protein-3 (IGFBP-3) over IGFBP-1, an IGF-1
 CC analog with a binding affinity preference for IGFBP-1 over IGFBP-3, or a
 CC IGFBP displacer peptide that prevents the interaction of IGF with an
 CC IGFBP and does not bind to human IGF receptor. The method is useful for
 CC treating cartilage disorders (CD), including degenerative CD, articular
 CC CD such as rheumatoid arthritis and osteoarthritis. The present sequence
 CC was used to illustrate the invention

XX	Novel angiotensin converting enzyme-2 binding polypeptide useful for
PT	treating, preventing or ameliorating hypertension, congestive heart
PT	failure, stroke, left ventricular failure and atherosclerotic heart
PT	disease.
XX	
XX	Example 1, Page 179; 246pp: English.
XX	
XX	The invention relates to novel isolated angiotensin converting enzyme
CC	(ACE)-2 binding polypeptides (1), which are useful for treating,
CC	preventing or ameliorating hypertension, congestive heart failure,
CC	stroke, left ventricular failure and atherosclerotic heart disease in an
CC	animal. The peptides are useful for detecting, isolating, or purifying
CC	ACE-2 proteins or ACE-2 like polypeptides in solutions, mixtures, or
CC	biological samples; for inhibiting or reducing stenosis, pain,
CC	inflammatory reactions, abnormal histamine release, vasoconstriction,
CC	diseases or disorders related to vasoconstriction, and diseases and/or
CC	disorders associated with aberrant action of ACE-2; to detect, isolate,
CC	or remove ACE-2 target proteins in solutions, and also to identify
CC	epitopes of ACE-2; to detect, diagnose, prognosis, or monitor
CC	cardiovascular diseases, and disorders associated with aberrant
CC	aldosterone activity, or cell proliferation; for preventing and treating
CC	renal disorders, e.g., acute glomerulonephritis, and diseases associated
CC	with it; to assay protein levels in a biological sample, for
CC	immunophenotyping of cell lines and biological samples by their ACE-2
CC	expression, and for identifying cells, such as cardiac myocytes,
CC	endothelial and epithelial cells of Bowman's capsule. The peptides are
CC	especially useful for treating, preventing, or ameliorating diseases or
CC	disorders associated with hypotension, ischemia, asthma, allergy, multiple
CC	sclerosis, cancers, Parkinson's and Alzheimer's diseases, rheumatoid
CC	arthritis, gout, trauma, dermatitis, diabetes mellitus, Sjogren's
CC	syndrome, Addison's disease, chronic active hepatitis, Crohn's disease,
CC	sarcoidosis, AIDS, and sepsis. In an example of the invention, ACE-2
CC	binding peptides were isolated from a number of peptide display
CC	libraries. Evaluation of the peptide sequences revealed a series of
CC	peptide families. This sequence represents a specific example of one of
CC	the ACE-2 binding peptides of the invention

DR Detection of insulin-like growth factor binding protein in biological
PT fluid, by contacting the fluid with antibody that binds epitopes and
PT peptide concentration to saturate insulin-like growth factor binding
PT sites.

PS Example 7; SEQ ID NO 69; 116pp; English.

XX The invention describes a method of determining an amount of insulin-like
CC growth factor binding protein (IGFBP) that binds a peptide in a
CC biological fluid. Measuring the amount of insulin-like growth factor
CC binding protein that binds a peptide in a biological fluid involves
CC contacting the fluid with a first antibody attached to a solid-phase
CC carrier and a concentration of the peptide for a time to saturate all IGF
CC binding sites on the IGFBP to form a saturated complex. The first
CC antibody binds epitopes on the IGFBP so that in the presence of the
CC antibody the IGF binding sites remain on the IGFBP for binding the
CC peptide thus forming a complex between the first antibody and the IGFBP.
CC The unbound peptide is removed and the saturated complex is contacted
CC with a labeled second antibody, which binds epitopes on the peptide that
CC are available for binding when the peptide is bound to the IGFBP. The
CC unbound second antibody is removed and the amount of labeled second bound
CC is analysed as a measure of the amount of IGFBP in the biological sample.
CC The method is useful for determining IGFBP that binds a peptide in a
CC biological fluid. The method provides antibody attached to a solid-phase
CC carrier and a peptide concentration that inhibits interaction of the IGF
CC with IGFBPs and does not bind to human IGF receptor. This is the amino
CC acid sequence of a peptide that binds IGFBP-3 blocking binding of IGFBP-3
CC to IGF-I.

 CC related, neurological, cardiac (e.g. congestive heart failure), renal or
 CC immunological disorders. The present sequence inhibits binding of IGF-1
 to IGFBP-3.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

channel. Blocks reversibly sodium channels in molluscan neurons,
but has no effect on sodium currents in bovine chromaffin cells or
in rat brain synaptosomes. Induces paralysis in bivalve mollusks
(Mytilus). No effect are observed on fish (Gambusia) and fly
larvae (Sarcophaga). Pn1VA is approximately 6 times more potent
than Pn1VA in blockade of the sodium current in Lymnaea neurons.
CC -|- SUBCELLULAR LOCATION: Secreted.
CC -|- TISSUE SPECIFICITY: Expressed by the venom duct.
CC -|- MASS SPECTROMETRY: MW=1789.5; METHOD=ESI; RANGE=1-17; NOTE=Ref.1.
CC -|- SIMILARITY: Belongs to the conotoxin M superfamily. Mu-type
family.

CC -I- FUNCTION: Activation of Rubisco (ribulose-1,5-bisphosphate
CC carboxylase/oxygenase; EC 4.1.1.39) involves the ATP-dependent
CC carboxylation of the epsilon-amino group of lysine leading to a
CC carbamate structure (By similarity).
CC -I- SUBCELLULAR LOCATION: Chloroplast stroma (By similarity).
CC -I- INDUCTION: By water stress.
CC -I- SIMILARITY: Belongs to the Rubisco activase family.
CC
CC This Swiss-Prot entry is copyright. It is produced through a collaboration
CC between the Swiss Institute of Bioinformatics and the EMBL outstation -
CC the European Bioinformatics Institute. There are no restrictions on its
CC use as long as its content is in no way modified and this statement is not
CC removed.

 RT "Purification and primary structures of duck fibrinopeptides A and B";
 RL Sci. Sin., Ser. B, Chem. Biol. Agric. Med. Barth Sci. 28:31-35(1985).
 CC -1- FUNCTION: Fibrinogen has a double function: yielding monomers that
 CC polymerize into fibrin and acting as a cofactor in platelet
 CC aggregation.
 CC -1- SUBUNIT: Heterohexamer; disulfide linked. Contains 2 sets of 3
 CC nonidentical chains (alpha, beta and gamma). The 2 heterochains
 CC are in head to head conformation with the N-termini in a small
 CC central domain (by similarity).
 CC -1- DOMAIN: A long coiled coil structure formed by 3 polypeptide
 CC chains connects the central nucleolus to the C-terminal domains
 CC (distal nucleolus). The long C-terminal ends of the alpha chains
 CC fold back, contributing a fourth strand to the coiled coil

CC structure.
 CC -1- PPM: Conversion of fibrinogen to fibrin is triggered by thrombin,
 CC which cleaves fibrinopeptides A and B from alpha and beta chains,
 CC and thus exposes the N-terminal polymerization sites responsible
 CC for the formation of the soft clot.

 RT "Phospholipase A2 from Naja naja sputatrix venom is a muscarinic
 acetylcholine receptor inhibitor."
 RL Arch. Biochem. Biophys. 328:17-25(1996).
 CC -1- FUNCTION: PA2 catalyzes the calcium-dependent hydrolysis of the 2-
 acyl groups in 3-sn-phosphoglycerides. Blocks neuromuscular
 transmission at the postsynaptic site. Binds to the muscarinic
 acetylcholine receptor.
 CC -1- CATALYTIC ACTIVITY: Phosphatidylcholine + H(2)O = 1-
 acylglycerophosphocholine + a carboxylate.
 CC -1- COFACTOR: Binds 1 calcium ion (By similarity).
 CC -1- SUBUNIT: Monomer.
 CC -1- SUBCELLULAR LOCATION: Secreted.
 CC -1- SIMILARITY: Belongs to the phospholipase A2 family. Group I
 subfamily.

XX Novel high molecular weight Dermatophagoides nucleic acid polypeptides

XX used to modify an animal's hypersensitivity to mite allergens.

XX Claim 3; Page 69; 154pp; English.

XX Sequences AAY5510-Y5522 represent proteolytic fragments of

XX Dermatophagoides farinae high molecular weight mite allergen protein (HMW

XX -map) composition. The HMW-map composition was isolated from a D. farinae

XX homogenate by gel filtration, with each fraction being analysed for the

XX presence of proteins that bound to IGE present in mite-allergic dog

XX antiserum. The HMW-map composition comprises mapA (a 109 kD protein) and

XX mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids

XX encoding them, may be used in therapeutic compositions to modify an

XX animal's hypersensitivity reaction to mite allergens. Animals that may be

XX created include mammals and birds, especially felines, canines, equines,

XX humans, other pets, and work or domestic animals. The proteins or

XX fragments may also be used to diagnose allergies via a skin test. The

XX proteins and peptides can also be used to raise antibodies, which have a

XX variety of potential uses. For example, they can be used as vaccines to

XX passively immunise animals against dust mite hypersensitivity, as

XX positive controls in test kits and as tools to recover desired dust mite

XX allergens from a mixture of proteins

XX (HESK-) HESKA CORP.

XX Mccall CA, Hunter SW, Weber ER;

XX WPI; 2002-351888/38.

XX New mite allergenic protein isolated from Dermatophagoides, designated

XX Der HMW-map protein, useful as a vaccine for treating mite allergy.

XX Claim 12; Page 70; 161pp; English.

XX The invention relates to an isolated mite allergenic protein of

XX Dermatophagoides, designated Der HMW-map protein, and its related nucleic

XX acid. The Der HMW-map protein is useful for eliciting an immune response

XX against Der HMW-map protein. The protein or a reagent comprising a non-

XX proteinaceous epitope is useful for identifying an animal (e.g., dog,

XX cat) susceptible to or having an allergic response to a mite. A

XX therapeutic composition is useful for desensitising a host animal to an

XX allergic response to a mite. The DNA and protein can be used in the

XX detection of anti-Der HMW-map antibodies in animal fluids, and inhibition

XX of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a

XX disease. Antibodies that bind to Der HMW-map are useful for inhibiting

XX binding of proteins to IGE, to prevent immunocomplex formation, thus

XX reducing hypersensitivity responses to mite allergens, and as vaccines

XX against mite allergen hypersensitivity. Sequences AAU96314-AAU96342

XX represent Der HMW-map polypeptides of the invention

 XX New immunogenic peptides with HLA binding motif, useful in treatment and
 PT diagnosis of cancers and viral diseases.
 XX Claim 1, Page 93; 150pp; English.
 PS
 XX AA45390 to AA48224 represent specifically claimed immunogenic peptides
 CC having a human major histocompatibility complex (MHC) Class I (also known
 CC as human leukocyte antigen (HLA)) binding motif. The immunogenic peptides
 CC can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, A1, A3.2
 CC or A24.1 or HLA-B or C) and induce a cytotoxic T cell response against
 CC the antigen from which the peptide is derived. Cytotoxic T lymphocytes
 CC (CTLs) which destroy antigen-bearing cells are normally induced by an
 CC antigen in the form of a peptide fragment bound to a HLA molecule, rather
 CC than the intact foreign antigen itself, and are particularly important in
 CC tumour rejection and in fighting viral infections. The peptides are
 CC therefore useful therapeutically to treat or prevent viral infections and
 CC cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B
 CC and C, AIDS, and renal carcinoma. They can be administered as vaccines to
 CC elicit an immune response in individuals susceptible or otherwise at risk
 CC of viral infection or cancer, or used to treat chronic or acute
 CC conditions. They are also useful diagnostically, and can be used to
 CC induce a cytotoxic T cell response, by contacting a cytotoxic T cell with
 CC the peptide e.g. to produce CTLs ex vivo for infusion back into a
 CC patient. The polynucleotides encoding the immunogenic peptides are also
 CC useful therapeutically and for immunisation as above

 PT New Chemerin polypeptides, useful for diagnosing and treating a disease,
 PT e.g. neoplasms, hypergammaglobulinemia, paraproteinemias, purpura,
 PT sarcoidosis, Sezary Syndrome, Waldenstrom's Macroglobulinemia, Gaucher's
 PT Disease, or histiocytosis.
 XX
 XX Example 2; SEQ ID NO 43; 183pp; English.
 PS
 XX The invention describes a polypeptide (I) of up to 50 amino acids where
 CC the polypeptide binds specifically to a chemerin polypeptide. Also
 CC described are: a nucleic acid sequence encoding (I); an expression vector
 CC comprising the coding sequence of the nucleic acid; a transgenic animal
 CC transduced with the expression vector; a (therapeutic) composition
 CC comprising (I) and an isolated Chemerin polypeptide or a nucleic acid
 CC sequence of (I); an antibody that selectively binds to (I); identifying
 CC an agent that modulates the interaction between a Chemerin polypeptide
 CC and a Chemerin polypeptide; detecting the presence, in a sample, of an
 CC agent that modulates the interaction between a Chemerin polypeptide and a
 CC Chemerin polypeptide in a sample; identifying an agent that modulates
 CC the function of Chemerin polypeptide; detecting the presence, in a
 CC sample, of an agent that modulates the function of Chemerin polypeptide;
 CC diagnosing a disease or disorder characterized by dysregulation of
 CC Chemerin (polypeptide) signaling; a kit, for screening agents that
 CC modulate the signaling activity of Chemerin polypeptide or for
 CC diagnosing a disease or disorder characterized by dysregulation of
 CC Chemerin polypeptide signaling, comprising an isolated Chemerin
 CC polypeptide, (I), an isolated polynucleotide encoding (I), a cell
 CC transformed with a polynucleotide encoding (I), and its packaging
 CC materials; a non-human mammal transgenic for a Chemerin polynucleotide
 CC encoding (I); identifying an antibody inhibiting Chemerin activation;
 CC and an in vitro method of inhibiting cell proliferation. The
 CC (therapeutic) composition or expression vector is useful for preparing a
 CC medicament for ex vivo gene therapy or for in vivo gene therapy or a
 CC medicament for inhibiting cell proliferation, where the medicament is
 CC used for treating a disease, e.g. neoplasms, hypergammaglobulinemia,
 CC lymphoproliferative diseases, disorders, and/or conditions,
 CC paraproteinemias, purpura, sarcoidosis, Sezary Syndrome, Waldenstrom's
 CC Macroglobulinemia, Gaucher's Disease, histiocytosis, and any other
 CC hyperproliferative disease. The polypeptides and polynucleotides and
 CC methods are useful for diagnosing and treating the cited diseases. This
 CC is the amino acid sequence of a mouse chemerin peptide used to analyse
 CC processing of immature chemerin.

PI Aulic-Riche D, Ackinson B, Geyzen MH;

CC describes apparatus useful for monitoring an interaction of an exogenous
 CC molecule with a capture agent, the array both in the presence and
 CC absence of candidate compounds, identifying molecules that modulate
 CC trafficking in biological particles or modulate activity, functional or
 CC structural properties of the biological particle. As such, it can be used
 CC for elucidating biological pathways and their reactions that occur either
 CC simultaneously or sequentially, disease processes, inhibitors and
 CC enhancers of a molecular system or for understanding receptor-signal
 CC recognition. In particular, it enables assaying one or more biological
 CC samples having one or more targets per sample on a single array, such
 CC that it is cost effective and specific. This peptide sequence is an
 CC exemplary 6-mer peptide epitope that provides a highly specific capture
 CC agent of the invention.

XX Evenly distributing tags among members of starting library by dividing
 PT starting library into sublibraries, attaching tag to members of
 PT sublibrary, mixing tagged sublibraries and splitting mixed library into
 PT array libraries.

XX Disclosure; SEQ ID NO 957; 293pp; English.

XX The invention relates to evenly distributing tags (e.g. epitopes) or
 CC nucleic acid molecules encoding polypeptide tags among members of a
 CC starting library, involving optionally adjusting the diversity of a
 CC starting library so that the diversity is within an order of magnitude of
 CC the number of molecules in the library, dividing the starting library
 CC into n sublibraries designated 1-n, where n is equal to or less than the
 CC number of unique tags (where each unique tag specifically binds to a
 CC different capture agent), attaching a tag to several members of each
 CC sublibrary to produce n tagged sublibraries containing tagged members
 CC (where each member has the same tag, and the tag is unique to each
 CC sublibrary), mixing some or all of the tagged sublibraries to produce a

CC mixed library (where the number of tagged molecules added from each
 CC sublibrary is the same), and splitting the mixed library into q arrays.
 CC libraries, where q is from 1 up to a predetermined number of arrays. Also
 CC included are a collection of tagged molecules produced by the method, a
 CC capture system comprising the tagged polypeptides and an addressable
 CC collection of capture agent (where each locus in the collection contains
 CC capture agents that specifically bind to the same tag, and the tagged
 CC molecules are specifically bound to capture agents), capturing molecules
 CC (involving contacting a capture system with molecules under conditions,
 CC where molecules bind to the capture system, and the capture system
 CC comprises several of addressed loci with an addressed collection of
 CC polypeptide-tagged molecules bound to addressed capture agents at each
 CC locus, the capture agents at each locus bind to the same polypeptide tag,
 CC the polypeptide tag to which the capture agent binds is different among
 CC the loci, each locus in capture system contains a several of different
 CC molecules, each with the same tag bound to the capture agents, and the
 CC polypeptide tags are evenly distributed among the tagged molecules such
 CC that the diversity of tagged molecules at each locus in the capture
 CC system is within one order of magnitude), sorting molecules or reducing
 CC their diversity, and reducing the diversity of a collection of molecules.
 CC The starting library encodes antibodies (or their fragments or single-
 CC chain antibody fragments (scFvs)) or is comprised of antibodies (or their
 CC fragment), where the antibodies or their fragments specifically bind to
 CC antigens. The methods are useful for evenly distributing tags among
 CC members of starting library, for identifying modulators of interactions
 CC between capture systems and molecules (which involves adding/exposing a
 CC test compound to the capture system to a condition before, during or
 CC after contacting the capture system with molecules or before, during or
 CC after contacting the capture agents with the tagged molecules, and
 CC identifying a change in an interaction of the molecules with the capture
 CC system or tagged molecules with the capture agents to identify a test
 CC compound that modulates the interaction between the molecules and the
 CC capture system or between tagged molecules and capture agents. The change
 CC is assessed by detecting a change in binding pattern or a physical or
 CC chemical change in the bound molecules or a conformational change in the
 CC bound molecules and/or tagged molecules). The present sequence is a
 CC peptide included in the sequence listing but not mentioned anywhere else
 CC in the specification.

 PT positions.
 XX
 PS Claim 22; SEQ ID NO 9, 196pp; English.
 XX
 CC The present invention relates to a collection (I) of antigenic
 CC polypeptides (AD245683 - AD246593), which comprises at least three
 CC antigenic polypeptides that comprise five to eight unique residues and
 CC include at least four residues, designated critical residues, chosen from
 CC Glu, Pro, Gln, Asn, Phe, His, Thr, Lys, Ieu, Asp, where the critical
 CC residues occupy the N and C terminal positions in each polypeptide, and
 CC no more than three polypeptides in the collection contain the same four
 CC critical residues. (I) is useful as binding partners for use with capture
 CC agents which recognize the highly antigenic, highly specific
 CC polypeptides.

 XX
 CC Complex for treating e.g. cancer, comprises a targeting domain
 PT specifically binding to a subject-specific target and an effector
 PT molecule rendering the complex biologically effective.
 XX
 PS Disclosure; SEQ ID NO 9, 403pp; English.
 XX
 CC The invention describes a therapeutic complex comprising a targeting
 CC domain that specifically binds to a subject-specific target and an
 CC effector molecule that renders the resulting therapeutic complex
 CC biologically effective, where the targeting domain and effector molecule
 CC are linked by a specific interaction of a binding partner and a capture
 CC agent. Also described are: preparing (M1) (I) by contacting a targeting
 CC domain and an effector molecule to form a complex; rendering an antibody
 CC or fragment therapeutically effective; rendering a target-specific
 CC polypeptide therapeutically effective; screening test molecules to
 CC identify effectors for use in (I); and screening test molecules to
 CC identify targeting domains for use in (I). (I) is used to render an
 CC antibody or its fragment or target specific polypeptide therapeutically
 CC effective. (II) is used to treat a disease or condition, by administering
 CC (II) which comprises a therapeutic complex designed for personalized
 CC treatment. The disease is chosen from B cell-mediated disease, autoimmune
 CC disease and T cell-mediated disease, cancers, inflammatory disease,
 CC autoimmune disease, infectious disease, neurodegenerative disease and
 CC ophthalmic disease, preferably non-Hodgkin's lymphoma, rheumatoid
 CC arthritis, lupus, multiple sclerosis, melanoma, posterior intraocular
 CC inflammation, pathogen and virus infection. The targeting domain and the
 CC effector are administered as a complex, or administered sequentially,
 CC simultaneously or intermittently. The targeting domain and effector are
 CC administered separately and either one or more doses of the targeting
 CC domain is(are) administered prior to administration of a therapeutic
 CC complex also comprising the targeting domain, or one or more doses of the
 CC effector prior is(are) administered prior to administration of a
 CC therapeutic complex comprising the effector. This is the amino acid
 CC sequence of an antigenic peptide used in the creation of a therapeutic
 CC complex of the invention.

XX Screening for compounds useful for promoting wakefulness or sleep, and
PT for treating sleeping disorders, e.g. insomnia, hypersomnia or sleep
PT apnea, comprises administering a prolactin releasing peptide agonist or
PT antagonist.
XX Example 2; Page 23; 35pp; English.
XX The present invention relates to a method of screening for compounds for
CC promoting wakefulness or sleep in a mammal. The method involves
CC administering a prolactin releasing peptide (PrP) receptor (GPR10)
CC agonist or antagonist respectively and determining the ability of the
CC compound to promote wakefulness or sleep. The compounds identified from
CC the method are used in the therapy of epilepsy and other diseases
CC associated with absence seizures and in promoting wakefulness and sleep
CC in individuals having sleep disorders such as insomnia and narcolepsy.
CC PrP receptor agonists may be used to treat common disorders which lead
CC to sleepiness, e.g. sleep apnoea, narcolepsy, idiopathic hypersomnia and
CC psychogenic hypersomnia. PrP receptor antagonists are useful for
CC promoting sleep and for treating insomnia such as adjustment sleep
CC disorder and psychophysiologic insomnia. The present sequence is human
CC GPR10 mutant C-terminal peptide

CC This is the N-terminal amino acid sequence of the (R)-specific acylase of
 CC Arthrobacter aureescens Acs5b (large subunit) which acts as a biocatalyst
 CC exhibiting amine acylase enzymatic activity without added lipase or
 CC esterase activity. It is capable of stereoselectively hydrolysing a
 CC racemic acylamide which has an aliphatic acyl residue and which is not a
 CC derivative of a natural amino acid. The biocatalyst is especially used
 CC for the stereoselective hydrolysis of N-acetyl-1-phenylethylamine or N-
 CC acetyl-2-amino-1-phenyl-4-pentene, giving one enantiomer of the
 CC corresponding phenylamine and leaving the other enantiomer of the
 CC starting amide. No end uses are given for the separated enantiomers,
 CC although reference is made to the need for enantiomerically pure
 CC pharmaceutical and agrochemical drugs

 PT Screening for compounds useful for promoting wakefulness or sleep, and
 PT for treating sleeping disorders, e.g. insomnia, hypersomnia or sleep
 PT apnea, comprises administering a prolactin releasing peptide agonist or
 PT antagonist.
 XX
 PS Example 2, Page 23; 35pp; English.
 XX
 CC The present invention relates to a method of screening for compounds for
 CC promoting wakefulness or sleep in a mammal. The method involves
 CC administering a prolactin releasing peptide (PRP) receptor (GPR10)
 CC agonist or antagonist respectively and determining the ability of the

CC compound to promote wakefulness or sleep. The compounds identified from
 CC the method are used in the therapy of epilepsy and other diseases
 CC associated with absence seizures and in promoting wakefulness and sleep
 CC in individuals having sleep disorders such as insomnia and narcolepsy.
 CC PRP receptor agonists may be used to treat common disorders which lead
 CC to sleepiness, e.g., sleep apnoea, narcolepsy, idiopathic hypersomnia and
 CC psychogenic hypersomnia. PRP receptor antagonists are useful for
 CC promoting sleep and for treating insomnia such as adjustment sleep
 CC disorder and psychophysiological insomnia. The present sequence is human
 CC GPR10 mutant C-terminal peptide

XX The present sequence represents a peptide which resembles or mimics an
 CC epitope present on human cartilage glycoprotein 39 (HC gp-39), an
 CC autoantigen in rheumatoid arthritis. The invention relates to peptides
 CC consisting of 16-55 amino acid residues comprising at least one of the
 CC following 19 sequences: LVCYVTSMS; FLCHYIYS; IISPNIS; LKTLISVG;
 CC FKSYPPPT; PDGDLML; LYSRRKQ; YDIKISQ; LDFISMT; FISTMTDP;
 CC FKGGDAS; VAVGDMRL; MLRGAPAS; LAYELCDF; LRGATVHT; YLKORLAG;
 CC LAGAVWAL; VWALDLDF; or LDLDFFQS. They can be used medicinally in antigen
 CC specific immunosuppressive therapy, particularly the treatment of T-cell
 CC mediated destruction of articular cartilage in autoimmune diseases (e.g.
 CC rheumatoid arthritis). They can also be used to detect activated
 CC autoreactive T cells in an individual. The peptides have a specific
 CC effect on the autoreactive T cells, thus leaving the other components of
 CC the immune system intact, unlike the non-specific suppressive effect of

CC immunosuppressive drugs, and do not cause toxic side effects. The
 CC peptides are predominantly recognised by autoreactive T cells from
 CC rheumatoid arthritis patients, but rarely by those from healthy donors

PS Claim 6; Page 56; 68pp; English.

XX The invention relates to compounds comprising an immunogenic ligand whose
 CC sequence is based in part on residues 42-50 of human cancer antigen
 CC ATP4/CREB-2 (not defined) and the polynucleotides encoding them. Also
 CC included are an antibody that specifically recognises and binds the
 CC compound, a method for inducing an immune response in a subject by
 CC delivering the compound, a method of immunotherapy comprising
 CC administering to a subject the antibody, an immune effector cell that has
 CC been raised in vitro or in vivo in the presence and at the expense of an
 CC antigen presenting cell that presents the immunogenic compound in the
 CC context of an MHC (major histocompatibility complex) molecule and a
 CC method of adoptive immunotherapy comprising administering the immune
 CC effector cell. The compounds are useful for modulating an immune response
 CC to the synthetic and naturally occurring compounds. The compounds are
 CC especially useful in gene therapy or as components of anti-cancer
 CC vaccines. The compounds are useful for treating cancer, particularly
 CC ovarian cancer. The compounds are also useful for generating antibodies
 CC that specifically recognise and bind to these molecules. These antibodies
 CC are further useful for immunotherapy when administered to a subject. The
 CC peptides, polypeptides and polynucleotides are useful in diagnostic
 CC methods, for the detection and purification of antibodies, or as
 CC immunogens for the production of antibodies. The present sequence

CC represent a human cancer antigen ATP4/CREB-2 based immunogenic ligand of
 CC the invention. Note: Immunogenic ligands AAU74681-AAU74686 are stated to
 CC be encoded by the degenerate DNA sequences AAS20120-AAS20125 respectively
 CC but have not been cross-referenced or CDS features put in due to the
 CC degeneracy of the DNA sequences

 PT New polypeptide that binds to vascular endothelial growth factor receptor
 PT -2, useful for diagnosis and treatment of e.g. tumors, and its conjugates
 PT with therapeutic or imaging agents.
 XX
 PS Claim 79; SEQ ID NO 133; 350pp; English.
 XX
 CC This invention relates to novel peptides useful for detecting and
 CC targeting primary receptors on endothelial cells that bind vascular
 CC endothelial growth factor (VEGF). Specifically, it refers to detecting
 CC the receptor tyrosine kinase identified as VEGF-2, which is also known as
 CC kinase domain region (KDR) and foetal liver kinase-1 (flk-1). The present
 CC invention describes the involvement of the VEGF/KDR complex as important
 CC in angiogenesis, and that VEGF/KDR complex binding or KDR binding
 CC polypeptides can be used for imaging neoplastic tumours. Furthermore,
 CC these compositions are useful for targeting radiotherapeutics to specific
 CC sites for treating diseases associated with KDR activation, which include
 CC malaria, HIV, SIV infection, simian haemorrhagic fever virus and
 CC enterohaemorrhagic Escherichia coli infection. Accordingly, these
 CC compositions exhibit various activities including protozoacidal, anti-
 CC HIV, virucidal, antibacterial and cytostatic. This peptide sequence is a
 CC high affinity binding peptide of KDR and the VEGF/KDR complex, part of
 CC the TN12 peptide library of the invention.

 PT Novel isolated polypeptide having ability to bind to kinase domain region
 PT or vascular endothelial growth factor/kinase domain region complex,
 PT useful in inhibiting vascular endothelial growth factor activation of
 PT kinase domain region.
 XX
 PS Claim 11; SEQ ID NO 133; 470pp; English.
 XX
 CC This invention relates to novel isolated peptides that can bind to a
 CC kinase domain region (KDR) or vascular endothelial growth factor
 CC (VEGF)/KDR complex. Specifically, it refers to polypeptides, peptide
 CC dimers and multimeric complexes that bind with high affinity to KDR (also
 CC known as the VEGF receptor 2 (VEGFR2) and foetal liver kinase 1 (flk-1))
 CC or the VEGF/KDR complex, and as such due to the involvement of VEGF and
 CC KDR in angiogenesis these binding peptides can be used for imaging
 CC important sites of angiogenesis, as well as in targeting therapeutics to
 CC such sites. The present invention describes these peptides as useful for
 CC promoting or inhibiting angiogenesis and pathogenic conditions associated
 CC thereof such as neoplastic tumours. Furthermore, these binding peptides
 CC are useful for treating malaria, HIV infection, SIV infection, simian
 CC haemorrhagic fever virus infection and enterohaemorrhagic Escherichia
 CC coli infection. Accordingly, they exhibit cytostatic, antiangiogenic,
 CC antimarial, anti-HIV, virucidal and antibacterial activities. In
 CC particular, they inhibit VEGF activation of its receptor (i.e. KDR), and
 CC enable efficient detection, imaging and localisation of activated
 CC endothelial cells exhibiting upregulated KDR expression. This peptide
 CC sequence is a high affinity KDR and VEGF/KDR cyclic binding peptide
 CC belonging to the secondary TN12 library of the invention.

XX Polypeptides and polynucleotides comprising protective sequences useful

PT for preventing, delaying or rescuing a cell from death in disease,

PT condition or disorders such as Alzheimer's disease, stroke, tumours,

PT trauma.

XX Claim 17; Fig 7B; 228bp; English.

XX The invention relates to an isolated polypeptide encoded by a protective

CC sequence, which is a polynucleotide comprising sequences which, when

CC introduced into a cell either predisposed to undergo cell death or in the

CC process of undergoing cell death, prevent, delay, or rescue the cell from

CC death, relative to a corresponding cell into which exogenous nucleic

CC acids have been introduced. The sequences of the invention are useful for

CC diagnosing a protective sequence-mediated condition, disorder or disease

CC in an individual. The treatable disorders are preferably of the central

CC nervous system of humans including ischaemia-related conditions such as

CC stroke, cerebral herniation, septic embolism, cerebral oedema, infections

CC such as meningitis, protozoal infections such as malaria, metastatic

CC infections such as echinococcosis, vascular diseases such as ischaemic

CC encephalopathy, conditions involving the eye such as macular

CC degeneration, diabetic retinopathy, trauma such as epidural haematoma,

CC tumours such as primary intracranial tumours, degenerative diseases such

CC as Alzheimer's disease and nutritional, environmental and metabolic

CC conditions. Sequences AAU7325-AAU7378 represent open reading frames of

CC the human protective sequence polynucleotides

PT Photocleavable compound useful to detect and isolate component e.g.
PT Protein from biological sample comprises affinity moiety attached via
PT linker to photoreactive group, which in turn attached via second linker
PT to protein reactive group.
XX
XX Disclosure; SEQ ID NO 63; 86pp; English.
XX
XX The invention relates to photocleavable isotope-coded affinity tags which
CC can be used to detect and isolate target proteins and protein fragments
CC from biological samples. The photocleavable isotope-coded affinity tags
CC comprise an affinity capable of binding to a capture reagent attached via
CC a first linker to a photoreactive group, which is in turn attached via a
CC second linker labeled with one or more stable isotopes to a protein-
CC reactive group which reacts with functional groups on polypeptides. The
CC invention also relates to methods of preparing the photocleavable
CC affinity tags, and to a method of providing information about a mixture
CC of proteins. This method comprises conjugating photocleavable affinity
CC tags to the proteins, subjecting these protein conjugates to proteolysis
CC to yield affinity tagged peptides, capturing these affinity tagged
CC peptides on a solid support, and releasing the peptides by exposing the
CC photocleavable group of the tag. The method optionally further involves
CC analyzing the released peptides using mass spectrometry. The
CC photocleavable affinity tags of the invention can be used to detect and
CC isolate target components, especially polypeptides, from heterogeneous
CC mixtures such as biological samples, proteinaceous compositions, nucleic
CC acids, biomass, cell cultures, cellular extracts, vesicles or in vivo
CC sources. The target components that can be isolated include immune system
CC modulators, cytokines, agents of the hematopoietic system, proteins,
CC nucleic acid, hormones, gene products, antigens, cells, toxins, bacteria,
CC membrane vesicles, virus particles or combinations of the above. The tags
CC may be used to screen for changes in the expression or state
CC of enzymatic activity of specific proteins, or to implement a variety of
CC clinical and diagnostic analyses to detect the presence, absence,
CC deficiency or excess of a given protein or protein function in a
CC biological fluid (e.g. blood) or in cells or tissues. For example, they
CC can be used for the detection of disorders such as bacterial, viral or
CC parasitic infections, genetic disorders (e.g., enzyme overproduction or
CC deficiency), or neoplasias (e.g., tumors) in a sample from a patient.
CC Additionally, the photocleavable tags are envisaged for use in the
CC controlled release of a therapeutic agent at a selected site for the
CC treatment of the above disorders. Use of the photocleavable affinity tag
CC in protein analysis is rapid and efficient, and proteins can be isolated
CC and identified without the interference of steric hindrance and other
CC prior art problems before down-stream analysis and processing. Sequences
CC AD225576-AD225580 represent peptide sequences identified from database searches as
CC the top 5 matches for a peptide AD225581 whose mass spectrum was
CC determined in an illustration of the invention.

PT
XX Disclosure; SEQ ID NO 63; 241pp; English.
XX
XX The invention relates to agents and conjugates that can be used to detect
CC and isolate target components from complex mixtures such as proteins and
CC protein fragments from biological samples from in vivo and in vitro
CC sources. The agents comprise a detectable group bound to a photoreactive
CC group. The conjugates comprise agents coupled to substrates by covalent
CC bonds which can be selectively cleaved with the administration of
CC electromagnetic radiation. Target substances labeled with detectable
CC molecules can be easily identified and separated from a heterogeneous
CC mixture of substances. Exposure of the conjugate to radiation releases
CC the target in a functional form and completely unaltered. Using
CC photocleavable molecular precursors as the conjugates, labels can be
CC incorporated into macromolecules, the nascent macromolecules isolated and
CC the label completely removed. The invention also relates to targets
CC isolated with these conjugates which may be useful as pharmaceutical
CC agents or compositions that can be administered to humans and other
CC mammals. The present sequence is of a peptide fragment that was used to
CC identify a glyceraldehyde-3-phosphate dehydrogenase peptide fragment
CC AD268005 identified by the method of the invention.

XX	
CC	The present invention relates to beta-sheet breaker peptide analogues
CC	capable of inhibiting beta-pleated sheet formation in amyloid beta-
CC	peptide. These are obtained by modification of a beta-sheet breaker
CC	peptide. They can be used to reduce the formation of amyloid or amyloid-
CC	like deposits involving abnormal folding into beta-sheet structures or
CC	conformational change in prion Pr protein. They are thus useful in the
CC	treatment of Alzheimer's disease, PAF, Down's syndrome, other amyloidosis
CC	disorders, prion diseases such as kuru, Creutzfeldt-Jakob disease,
CC	Gerstmann-Strussler-Scheinker syndrome, prion associated human
CC	neurodegenerative diseases, scrapie, spongiform encephalopathy,
CC	transmissible mink encephalopathy and chronic wasting disease of mule
CC	deer and elk. The present sequence is a peptide described in the

PT	Novel inhibitory peptides which inhibit and structurally block abnormal
PT	folding of protein into amyloid or amyloid-like deposit and into
PT	pathological beta-sheet rich conformation, useful for treating
PT	Alzheimer's disease.
XX	
PS	Example 1; Col 53-54; 51pp; English.
XX	
CC	The invention describes an isolated inhibitory peptide (I) which
CC	interacts with a hydrophobic beta-sheet forming cluster of amino acid
CC	residues on a protein or peptide for amyloid or amyloid-like deposit
CC	formation, and inhibits or structurally blocks the abnormal folding of
CC	proteins and peptides into amyloid or amyloid-like deposits and into
CC	pathological beta-sheet-rich conformation. (I) is useful for disorders or
CC	diseases associated with abnormal protein folding into amyloid or amyloid
CC	-like deposits or into pathological beta-sheet-rich precursors of such
CC	deposits, such as Alzheimer's disease, Down's syndrome, other amyloidosis
CC	disorders, human prion diseases, such as kuru, Creutzfeldt-Jakob disease
CC	(CJD), Gerstmann-Strausler-Scheinker syndrome (GSS), prion associated
CC	human neurodegenerative diseases as well as animal prion diseases such as
CC	scrapie, spongiform encephalopathy, transmissible mink encephalopathy and
CC	chronic wasting disease of mule deer and elk. (I) is also useful for
CC	detecting and diagnosing the presence or absence of amyloid or amyloid-
CC	like deposits in vivo and its precursors. This is the amino acid sequence
CC	of peptide associated with the inhibition of amyloid or amyloid like
CC	deposits

 PT Screening for compounds useful for promoting wakefulness or sleep, and
 PT for treating sleeping disorders, e.g. insomnia, hypersomnia or sleep
 PT apnea, comprises administering a prolactin releasing peptide agonist or
 PT antagonist.
 XX
 PS Example 2; Page 23; 35pp; English.
 XX
 CC The present invention relates to a method of screening for compounds for
 CC promoting wakefulness or sleep in a mammal. The method involves
 CC administering a prolactin releasing peptide (PrRP) receptor (GPR10)
 CC agonist or antagonist respectively and determining the ability of the
 CC compound to promote wakefulness or sleep. The compounds identified from
 CC the method are used in the therapy of epilepsy and other diseases
 CC associated with absence seizures and in promoting wakefulness and sleep
 CC in individuals having sleep disorders such as insomnia and narcolepsy.
 CC PrRP receptor agonists may be used to treat common disorders which lead
 CC to sleepiness, e.g. sleep apnoea, narcolepsy, idiopathic hypersomnia and
 CC psychogenic hypersomnia. PrRP receptor antagonists are useful for
 CC promoting sleep and for treating insomnia such as adjustment sleep
 CC disorder and psychophysilogic insomnia. The present sequence is human
 CC GPR10 mutant C-terminal peptide

 PT Characterizing a viral infection in a host, for developing treatment for
 PT severe acute respiratory syndrome-coronavirus (SARS-CoV), by determining
 PT homology profile of a viral-based sequence element with an endogenous
 PT host element.
 XX

PS Example 1, Fig 5A, 16pp; English.

XX The invention relates to a novel method for characterising a viral

CC infection in a host. The method comprises identifying at least one viral-

CC based sequence element in a biological sample obtained from the host,

CC determining a homology profile of the viral-based sequence element with

CC at least one endogenous host element and characterising the viral

CC infection based on the homology profile, where the homology profile is

CC indicative of a viral behaviour of the viral infection in the host. The

CC method of the invention demonstrates virucide applications and may be

CC useful for preparing a medicament for detecting and/or treating a viral

CC infection or related condition, such as an autoimmune disease e.g. type

CC I cryoglobulinemia, or lymphoproliferative disorder. The viral

CC infection may be due to HCV (Hepatitis C virus), HIV or a member of a

CC Retroviridae, Flaviviridae, Herpesviridae, Papillomaviridae or

CC Coronaviridae virus family. Treatment of the infection may utilise

CC vaccine or gene therapy. The target compound of the invention may be

CC useful for detecting the presence of a virus in a biological sample or

CC for manufacturing a medicament for treating SARS coronavirus (SARS-CoV)

CC and/or Human T-lymphotropic virus 1 (HTLV-I) infection. The methods are

CC further useful for developing treatment regimes to target genotype-

CC specific viral variants. The current sequence is that of a human

CC immunoglobulin light chain (IgVL) FR peptide of the invention.

PT Reagent of GTP-binding protein - consists of polypeptide of less than 33

PT aminoacid residues where 4 are basic aminoacid residues, etc.

XX

PS Disclosure; Fig 1; 4pp; Japanese.

XX

CC A reagent for activating GTP-binding protein (G-protein) consists of a

CC polypeptide of less than 33 amino acids, of which more than 4 are basic,

CC and more than 20% are hydrophobic. The reagent is useful for the

CC purification, identification, functional examination, etc. of G-protein,

CC a signal transducing protein. It will be possible to study the mechanism

CC of cell proliferation, anticancer action, prevention of dementia, by

CC activating/inhibiting the G-protein, using the reagent. The peptides

CC given in AAR04048-59, AAR05848, AAR09313 and indicated in the Features

CC table bind selectively, activating the G-protein. The peptides have the

CC same config. as the part of the receptor which binds to G-protein and is

CC effective for the transmission of signal information into the cell. The

CC reagent can be used in the form of powder or soln. Affinity purification

CC can be simply carried out by using ion-exchange resin beads such as

CC Sepharose. For example, the reagent is stuck onto the beads and

CC homogenate is passed through a column packed with the beads to obtain a

CC given G-binding protein

XX

CC The present invention describes a method for producing an ideal amino

CC acid sequence. The method comprises: (1) preparation of one initial amino

CC acid sequence corresponding to the structure of a protein; (2) selecting

CC the amino acid residues optimal to each site; (3) repeating the steps of

CC selecting the amino acid residues optimum to each sites of the total

CC amino acid residues constituting the N-order amino acid sequence

CC integer not less than 2) to give an N+1-order amino acid sequence

CC consisting of the selected amino acid residues until the N-order amino

CC acid sequence comes to be same as the N+1-order amino acid sequence; and

CC (4) selecting the resultant N-order amino acid sequence as the optimum

CC amino acid sequence of said protein. The method can design a protein with

CC desired functions and properties. AAY29343 to AAY29367 represent peptides

CC used in an example from the present invention where the stereo structure

CC of sperm whale myoglobin was targeted as a globular protein to detect an

CC amino acid sequence best fit to the structure of the main chain of the

CC sperm whale myoglobin

 PT Capturing biological particles, by contacting biological particles with
 PT capture system comprising addressed loci, addressed collection of
 PT polypeptide tagged molecules, capture agents, and polypeptide tag to
 PT which capture agent binds.
 PS Disclosure; SEQ ID NO 758; 505bp; English.
 XX
 CC The present invention relates to a method for the capture and analysis of
 CC biological particles using a capture system. The method is useful for
 CC capturing biological particles such as cells, portions of cells, cell
 CC membranes, viruses, viral capsids, viral particles, bacterial cells,
 CC eukaryotic cells, intracellular particles and nuclei, cell membranes, cell
 CC membrane fragments, nuclear membranes, nuclear membrane fragments, viral
 CC vectors or viral capsids with or without packaged nucleic acid, phage,
 CC phage vectors, phage capsids with or without encapsulated nucleotide
 CC acid, liposomes and other micellar agents. The biological particles are
 CC cells chosen from immune cells, neurons, cancer cells, bacterial cells
 CC or infected cells, subcellular compartment, organelles, viral particles
 CC or pathogens. The cells are dendritic cells, T cells, or B cells. The
 CC method is also useful for identifying molecules that interact with
 CC infectious agents, for profiling the surface of a biological particles,
 CC for identifying a modulator of an interaction among proteins in the
 CC biological particle, for identifying molecules that modulates the
 CC trafficking, activity or functional or structural property in the
 CC biological particle, and for mapping epitopes of molecules displayed on
 CC the surface of a biological particles. The method is also useful for
 CC sorting biological particles, for identifying a receptor on the surface
 CC of biological particle that transduces a signal from a polypeptide, and
 CC for identifying the molecule that interacts with an apically-localized
 CC molecule on a biological particle. The present sequence was used to
 CC illustrate the invention.

 PT Self-assembled array for monitoring interaction of molecules, comprising
 PT addressable array of capture agents having predetermined binding partners
 PT and conjugates comprising biological particle and/or molecule linked to
 PT binding partners.
 PS Disclosure; SEQ ID NO 758; 443bp; English.
 XX
 CC This invention relates to novel self-assembly arrays that each comprises
 CC an addressable collection of capture agents that have predetermined
 CC binding partners, as well as reagents for the covalent conjugation of the
 CC binding partners to molecules for display in the array. Specifically, it
 CC refers to the production of a flexible experimental surface, which can be
 CC adapted for use with almost any analytical system. The present invention
 CC describes apparatus useful for monitoring an interaction of an exogenous
 CC molecule with a capture agent of the array both in the presence and
 CC absence of candidate compounds, identifying molecules that modulate
 CC trafficking in biological particles or modulate activity, functional or
 CC structural properties of the biological particle. As such, it can be used
 CC for elucidating biological pathways and their reactions that occur either
 CC simultaneously or sequentially, disease processes, inhibitors and
 CC enhancers of a molecular system or for understanding receptor-signal
 CC recognition. In particular, it enables assaying one or more biological
 CC samples having one or more targets per sample on a single array, such
 CC that it is cost effective and specific. This peptide sequence is an
 CC exemplary 6-mer peptide epitope that provides a highly specific capture
 CC agent of the invention.

Evenly distributing tags among members of starting library by dividing starting library into sublibraries, attaching tag to members of sublibrary, mixing tagged sublibraries and splitting mixed library into array libraries.

Disclosure; SEQ ID NO 758; 293pp; English.

The invention relates to evenly distributing tags (e.g. epitopes) or nucleic acid molecules encoding polypeptide tags among members of a starting library, involving optionally adjusting the diversity of a starting library so that the diversity is within an order of magnitude of the number of molecules in the library, dividing the starting library into n sublibraries designated 1-n, where n is equal to or less than the number of capture tags (where each unique tag specifically binds to a different capture agent), attaching a tag to several members of each sublibrary to produce n tagged sublibraries containing tagged members (where each member has the same tag, and the tag is unique to each sublibrary), mixing some or all of the tagged sublibraries to produce a mixed library (where the number of tagged molecules added from each sublibrary is the same), and splitting the mixed library into q array libraries, where q is from 1 up to a predetermined number of arrays. Also included are a collection of tagged molecules produced by the method, a capture system comprising the tagged polypeptides and an addressable collection of capture agent (where each locus in the collection contains capture agents that specifically bind to the same tag, and the tagged molecules are specifically bound to capture agents), capturing molecules (involving contacting a capture system with molecules under conditions, where molecules bind to the capture system, and the capture system comprises several of addressed loci with an addressed collection of polypeptide-tagged molecules bound to addressed capture agents at each locus, the capture agents at each locus bind to the same polypeptide tag, the polypeptide tag to which the capture agent binds is different among the loci, each locus in capture system contains a several of different molecules, each with the same tag bound to the capture agents, and the polypeptide tags are evenly distributed among the tagged molecules such that the diversity of tagged molecules at each locus in the capture system is within one order of magnitude), sorting molecules or reducing their diversity, and reducing the diversity of a collection of molecules.

The starting library encodes antibodies (or their fragments or single-chain antibody fragments (SCFvs)) or is comprised of antibodies (or their fragment), where the antibodies or their fragments specifically bind to antigens. The methods are useful for evenly distributing tags among members of starting library, for identifying modulators of interactions between capture systems and molecules (which involves adding/exposing a test compound to the capture system to a condition before, during or after contacting the capture system with molecules or before, during or after contacting the capture agents with the tagged molecules, and identifying a change in an interaction of the molecules with the capture system or tagged molecules with the capture agents to identify a test compound that modulates the interaction between the molecules and the capture system or between tagged molecules and capture agents. The change is assessed by detecting a change in binding pattern or a physical or chemical change in the bound molecules or a conformational change in the bound molecules and/or tagged molecules). The present sequence is a peptide included in the sequence listing but not mentioned anywhere else in the specification.

 PT Complex for treating e.g. cancer, comprises a targeting domain
 PT specifically binding to a subject-specific target and an effector
 PT molecule rendering the complex biologically effective.
 PS Disclosure; SEQ ID NO 721; 403pp; English.
 XX
 CC The invention describes a therapeutic complex comprising a targeting
 CC domain that specifically binds to a subject-specific target and an
 CC effector molecule that renders the resulting therapeutic complex
 CC biologically effective, where the targeting domain and effector molecule
 CC are linked by a specific interaction of a binding partner and a capture
 CC agent. Also described are: preparing (M1) (I) by contacting a targeting
 CC domain and an effector molecule to form a complex; rendering an antibody
 CC or fragment therapeutically effective; rendering a target-specific
 CC polypeptide therapeutically effective; screening test molecules to
 CC identify effectors for use in (I); and screening test molecules to
 CC identify targeting domains for use in (I). (I) is used to render an
 CC antibody or its fragment or target specific polypeptide therapeutically
 CC effective. (II) is used to treat a disease or condition, by administering
 CC (II) which comprises a therapeutic complex designed for personalized
 CC treatment. The disease is chosen from B cell-mediated disease, autoimmune
 CC disease and T cell-mediated disease, cancers, inflammatory disease,
 CC autoimmune disease, infectious disease, neurodegenerative disease and
 CC ophthalmic disease, preferably non-Hodgkin's lymphoma, rheumatoid
 CC arthritis, lupus, multiple sclerosis, melanoma, posterior intraocular
 CC inflammation, pathogen and virus infection. The targeting domain and the
 CC effector are administered as a complex, or administered sequentially,
 CC simultaneously or intermittently. The targeting domain and effector are
 CC administered separately and either one or more doses of the targeting
 CC domain is(are) administered prior to administration of a therapeutic
 CC complex also comprising the targeting domain, or one or more doses of the
 CC effector prior is(are) administered prior to administration of a
 CC therapeutic complex comprising the effector. This is the amino acid
 CC sequence of an antigenic peptide used in the creation of a therapeutic
 CC complex of the invention.

 PT Preparing vaccine against cancer, useful for treatment or prevention,
 PT comprising coupling antibody mimetopes, selected from a phage-display
 PT library, to macromolecular carrier.
 PS Example 2B; Page 27; 36pp; German.
 XX
 CC This invention describes a novel method for preparing a vaccine (A)
 CC against cancer, comprising conjugating one or more mimetopes of an
 CC antibody (Ab) to a macromolecular carrier (I). The mimetopes are selected
 CC from a phage-display library using one or more autogenous or synthetic
 CC antibodies that are directed against one or more Ag expressed
 CC specifically on tumor cells. The products of the invention have
 CC cytostatic activity. (A) is used to prevent, or treat, cancers,
 CC particularly (adeno)carcinoma of the gastrointestinal tract, prostate or
 CC breast, multiple myeloma; B-lymphoproliferative post-transplant syndrome,
 CC B-cell malignoma, and chronic lymphatic leukemia. (A) can be produced
 CC even when the nature of Ag is not known; are free of phages and
 CC endotoxins (so well suited for use in humans) and provide active
 CC immunization before tumors have developed. AAG80176-AAG80182 represent
 CC peptide mimetopes used to illustrate the method of the invention

PT Novel isolated Thermotoga delta primer subunit of DNA polymerase III-type
PT enzyme, useful for amplifying and sequencing DNA molecule by polymerase
PT chain reaction.
XX
PS Disclosure; SEQ ID NO 210; 235bp; English.

XX The invention relates to an isolated Thermotoga delta' (prime) subunit of
CC a DNA polymerase III-type (polIII) enzyme appearing as AB084867, encoded
CC by a nucleic acid molecule hybridizing to the complement of AB084866. The
CC DNA and protein are two of a number of DNAs and proteins from
CC thermotable bacteria polIII subunits disclosed in the specification
CC (e.g. the dnaX, holA, holB, dnaN, dnaQ, dnaE, ssb genes). Also
CC included are a clamp loader complex comprising polIII delta', a DNA
CC polymerase III-type enzyme comprising the clamp loader and a kit
CC comprising a container that contains either a deoxynucleoside
CC triphosphate or a dideoxynucleoside triphosphate and a container
CC containing a DNA polymerase III-type enzyme complex. The polIII delta'
CC subunits are useful for amplifying and sequencing a DNA molecule by PCR.
CC The present sequence is a bacterial polIII subunit-associated peptide
CC included in the sequence listing but not mentioned anywhere else in the
CC specification.

PS
XX The invention relates to an isolated Bacillus PolC subunit of a DNA

CC polymerase III-type enzyme. The invention also relates to a method of
CC preparing DNA polymerase III enzymes, DNA molecules obtained by
CC amplifying and sequencing using the DNA polymerase III enzymes, DNA
CC probes constructed from the DNA sequences coding for dnaX, dnaN and holB
CC genes, DNA molecules encoding the DNA polymerase III enzymes, a method of
CC producing a recombinant thermotable DNA polymerase III enzyme from
CC thermophilic bacterium and a method of isolating a target DNA fragment
CC consisting essentially of DNA encoding a DNA polymerase III enzyme. The
CC Bacillus PolC subunit is useful for amplifying and sequencing a DNA
CC molecule by PCR. This sequence represents a DNA polymerase III-type
CC enzyme related peptide of the invention.

 PS Example 14; SEQ ID NO 210; 245bp; English.
 XX
 CC The invention relates to an isolated DNA molecule from *Bacillus* sp.
 CC encoding a single-strand DNA binding protein (ssb) appearing as ADO04402
 CC encoding the protein appearing as ADO04403, and DNAs hybridizing to
 CC complementary sequence of ADO04402 under hybridization conditions. Also
 CC included are an expression system comprising an expression vector into
 CC which the ssb gene is inserted and a host cell comprising a heterologous
 CC ssb gene. The following are disclosed as new, a kit (comprising a
 CC container that contains either a deoxynucleoside triphosphate or a
 CC dideoxynucleoside triphosphate, and a container containing DNA polymerase
 CC III-type complex), methods and products (for identifying, isolating and
 CC cloning DNA molecules encoding subunits encoded by genes of DNA
 CC polymerase III-type enzyme from thermophilic bacteria); preparing DNA
 CC polymerase III enzymes, DNA molecules obtained by amplifying and
 CC sequencing using the DNA polymerase III enzymes, recombinant alpha, beta,
 CC epsilon, tau, gamma, delta and delta' DNA polymerase III subunits, genes
 CC encoding bacterial chromosomal replicases, and producing a recombinant
 CC thermostable DNA polymerase III enzyme from a thermophilic bacterium. The
 CC ssb protein and gene, derived from *Bacillus stearothermophilus*, are

CC useful in producing a recombinant thermostable single-strand binding
 CC protein useful in removing secondary structure element from ssDNA during
 CC replication. The present sequence is a bacterial DNA polymerase III
 CC subunit derived peptide (or consensus motif) used to design PCR primers
 CC for isolation of the DNA polIII genes.

 PS Example 14; SEQ ID NO 210; 245bp; English.
 XX
 CC The invention describes an isolated *Bacillus* sp. single-strand binding
 CC protein (II), comprising a fully defined sequence (S1) of 164 amino acids
 CC as given in specification or encoded by a nucleic acid molecule
 CC hybridizing to the complement of a fully defined sequence (S2) of 492
 CC base pairs as given in specification. Also described are: a DNA-protein
 CC complex (II) comprising a DNA molecule containing a single-stranded
 CC region and (I) that is bound to the single-stranded region of the DNA
 CC molecule; a kit comprising a container that contains either a
 CC deoxynucleoside triphosphate or a dideoxynucleoside triphosphate, and
 CC container that contains a DNA polymerase III-type enzyme complex, and

CC container that contains (1); methods and products for identifying,
 CC isolating and cloning DNA molecules encoding subunits encoded by genes of
 CC DNA polymerase III-type enzyme; kits for amplification and sequencing of
 CC DNA molecules; DNA polymerase III enzyme subunits; preparing DNA
 CC polymerase III enzyme; DNA molecules obtained by amplifying and
 CC sequencing using the DNA polymerase III enzymes; producing and isolating
 CC a recombinant thermostable DNA polymerase III enzyme or its subunit from
 CC thermophilic bacterium; DNA (III) encoding (I); an expression system
 CC comprising an expression vector into which (III) is inserted; and a host
 CC cell comprising a heterologous (III). (I) is useful in removing a
 CC secondary structure element from single-stranded DNA (ssDNA),
 CC particularly during replication. (I) binds to single stranded regions of
 CC DNA strands during DNA replication and prevents the rewinding of the DNA
 CC strands. This is the amino acid sequence of a DNA polymerase III delta
 CC subunit peptide used to create a primer for the isolation of *Thermus*
 CC thermophilus holB.

XX Novel isolated DNA molecule from *Bacillus* species encoding beta subunit

PT of DNA polymerase III-type enzyme, useful for producing recombinant

XX thermostable beta subunit of DNA polymerase III-type enzyme.

PS Example 14; SEQ ID NO 210; 245bp; English.

XX The invention relates to an isolated DNA molecule from a *Bacillus* sp.
 CC encoding a beta subunit of a DNA polymerase III-type enzyme (appearing as
 CC AD515684 and encoding the protein appearing as AD515685), or hybridizing
 CC to the complement of AD515684 under hybridization conditions comprising
 CC at most about 0.9 M sodium citrate buffer at least 37C. Also included are
 CC an expression system comprising an expression vector into which AD515684
 CC is inserted and a host cell comprising AD515684. Also disclosed are
 CC methods and products for identifying, isolating and cloning DNA molecules
 CC which encode accessory subunits of a DNA polymerase III-type enzyme
 CC (gamma, tau, epsilon, alpha, PolC, delta, delta', and beta as well as SSB
 CC (single stranded binding protein)), methods for identifying polymerase
 CC III-type enzymes, isolated and purified DNA polymerase III from *Thermus*
 CC thermophilus and *B. stearothermophilus*, methods for preparing DNA
 CC polymerase III-type enzyme and kits for amplification and sequencing of
 CC DNA molecules that can achieve long chain extension of primed DNA. DNA
 CC polymerase III beta DNA is useful for producing a recombinant
 CC thermostable beta subunit of a DNA polymerase III-type enzyme from
 CC *Bacillus* sp., which involves transforming a host cell with DNA polymerase
 CC III beta DNA under conditions suitable for expression of the beta
 CC subunit, and isolating the beta subunit. DNA polymerase III beta DNA
 CC enables the investigator to obtain a thermostable polymerase III-type
 CC enzyme from a thermophilic bacterium that exhibits the ability to extend a
 CC primer over a long stretch (greater than 5 kb) of single-stranded (ss) DNA
 CC at elevated temperature, the ability to be stimulated by a cognate
 CC sliding clamp (e.g., beta) of the type that is assembled on DNA by
 CC 'clamp' loader (e.g., gamma complex), and have a clamp loading subunit
 CC that shows DNA stimulated ATPase activity at elevated temperatures and/or
 CC ionic strength. The *Thermus thermophilus* HolC gene was isolated by
 CC designing PCR primers from the peptide sequences of the genes immediately
 CC 5' and 3' to it (nearest neighbours), relying on the presumption that the
 CC gene arrangement would be preserved in closely related species. The
 CC present sequence is a nearest neighbour peptide from a related species,
 CC used to design primers for the amplification of *T. thermophilus* HolC
 CC gene.

 XX
 PT New isolated Aquifex delta prime subunit of DNA polymerase III-type
 PT enzyme, useful for amplifying and sequencing DNA molecule.
 XX
 PS Disclosure; SEQ ID NO 210; 245bp; English.
 XX
 CC The invention relates to a novel isolated Aquifex delta prime subunit of
 CC a DNA polymerase III-type enzyme. The subunit comprises a fully defined
 CC 305 amino acid (ADY55128) sequence given in the specification, and
 CC encoded by a nucleic acid molecule hybridizing to the complement of a
 CC fully defined 1051 nucleotide (ADY55127) sequence given in the
 CC specification. The invention further comprises: a clamp loader complex
 CC comprising the Aquifex delta prime subunit; a DNA polymerase III-type
 CC enzyme complex comprising the clamp loader complex; and a kit comprising
 CC a container containing either a deoxynucleoside triphosphate or a
 CC dideoxynucleoside triphosphate, and a container having a DNA polymerase
 CC III-type enzyme complex. The Aquifex delta prime subunit is useful for
 CC extending a primer over a long stretch of single-stranded DNA at an
 CC elevated temperature. The Aquifex delta prime subunit or DNA polymerase
 CC III-type enzyme complex is useful for amplifying and sequencing a DNA
 CC molecule. This sequence represents a T. thermophilus holB downstream
 CC peptide of the invention.

 XX
 PT New isolated DNA molecule from a Bacillus species encoding a PolC subunit
 PT of a DNA polymerase III-type enzyme, useful in producing thermostable DNA
 PT polymerases for use as chromosomal replicases.
 XX
 PS Example 14; SEQ ID NO 210; 245bp; English.
 XX
 CC The invention relates to a novel isolated DNA molecule from a Bacillus
 CC species encoding a PolC subunit of a DNA polymerase III-type enzyme
 CC comprising a sequence of 4301 base pairs (ADZ76761), encoding a sequence
 CC of 1433 amino acids (ADZ76762), or hybridizing to the complement of
 CC ADZ76761, where the sequences are given in the specification. The
 CC invention further comprises: an expression system comprising an
 CC expression vector into which is inserted the heterologous DNA molecule;
 CC a host cell comprising the heterologous DNA molecule; a method for
 CC producing a recombinant thermostable PolC subunit of a DNA polymerase III
 CC -type enzyme from a Bacillus species; and an isolated DNA molecule from
 CC Bacillus stearothermophilus encoding a PolC subunit of a DNA polymerase
 CC III enzyme, where the PolC subunit can co-operate with a clamp loader to
 CC form a DNA polymerase III-like particle. The methods and compositions of
 CC the present invention are useful in producing thermostable DNA
 CC polymerases for use as chromosomal replicases. The thermostable DNA
 CC polymerases, for use as chromosomal replicases, provide a faster and
 CC longer chain production in PCR, and a higher quality of DNA sequencing
 CC ladders. This sequence represents a T. thermophilus holB gene primer
 CC derived peptide of the invention.

PS Example 14; SEQ ID NO 210; 245pp; English.
XX
XX
CC The invention relates to an isolated Bacillus delta or delta prime or tau
CC subunit of a DNA polymerase III-type enzyme, the isolated subunit
CC comprising a fully defined sequence of 348, 252 or 559 amino acids
CC (AEA24764, AEA24766 or AEA24768), or being encoded by a nucleic acid
CC molecule hybridizing to the complement of a fully defined sequence of
CC 1044, 757 or 1677 bp (AEA24763, AEA24765 or AEA24767) at 0.9 M sodium
CC citrate buffer and at least 37 deg C. The methods and compositions of the
CC present invention are useful in thermostable DNA polymerases,
CC particularly to polymerases as chromosomal replicases derived from
CC thermophilic bacteria, and for providing high-fidelity amplified copies
CC of a nucleic acid molecule. This sequence represents a peptide from a DNA
CC polymerase III subunit of the invention

PT apnea, comprises administering a prolactin releasing peptide agonist or
PT antagonist.
XX
PS Example 2; Page 22; 35pp; English.
XX
CC The present invention relates to a method of screening for compounds for
CC promoting wakefulness or sleep in a mammal. The method involves
CC administering a prolactin releasing peptide (PRP) receptor (GPR10)
CC agonist or antagonist respectively and determining the ability of the
CC compound to promote wakefulness or sleep. The compounds identified from
CC the method are used in the therapy of epilepsy and other diseases
CC associated with absence seizures and in promoting wakefulness and sleep
CC in individuals having sleep disorders such as insomnia and narcolepsy.
CC PRRP receptor agonists may be used to treat common disorders which lead
CC to sleepiness, e.g. sleep apnoea, narcolepsy, idiopathic hypersomnia and
CC psychogenic hypersomnia. PRRP receptor antagonists are useful for
CC promoting sleep and for treating insomnia such as adjustment sleep
CC disorder and psychophysiological insomnia. The present sequence is human

 PT New composition comprising at least one peptide having allele-specific
 PT binding motifs for HLA, useful for preventing, treating or diagnosing
 PT viral diseases and cancer.
 PS
 XX
 PS Claim 1; Page 52-379; 382pp; English.
 CC The invention relates to a composition comprising at least one peptide
 CC having an isolated, prepared epitope selected from any of the sequences
 CC from 30 lists given in the specification. Also disclosed is a method for
 CC inducing a cytotoxic T cell response against a pre-selected antigen in a
 CC patient expressing a specific MHC class I allele by contacting cytotoxic
 CC T cells from the patient with the composition cited above. The
 CC composition comprises an epitope that is joined by an amino acid linker.
 CC The epitope is admixed or joined to a CTL or HTL epitope. The epitope is
 CC bound to an HLA molecule on the antigen-presenting cell, where when an A2
 CC -restricted cytotoxic lymphocyte (CTL) is present, a receptor of the CTL
 CC binds to a complex of the HLA molecule and the epitope. Specifically
 CC claimed are peptides having allele-specific binding motifs for HLA. The
 CC compositions and methods are useful for preventing, treating or
 CC diagnosing viral diseases and cancer. The peptide epitopes are useful as
 CC diagnostic agents for evaluating immune responses, for making antibodies
 CC and for evaluating efficacy of a vaccine. Sequences given in ADM29251-
 CC ADM37745 represent epitopes of the invention as given in Tables 2-31.

PT New composition comprising a substance that modulates the status of
PT 125P5C8 gene or a molecule that is modulated by 125P5C8, useful for
PT diagnosing or treating cancer.
XX
PS Example 51; Page 126; 183pp; English.
XX
XX The invention comprises a composition which contains a substance that can
CC modulate the status of 125P5C8 (125P5C8 is a novel cancer-associated
CC gene/protein), or a molecule that is modulated by 125P5C8. The
CC composition of the invention is useful for diagnosing or treating cancer.
CC The present amino acid sequence represents a 125P5C8-related peptide
CC which was used in an example of the invention.

 PS Claim 11; SEQ ID NO 3429; 1701pp + Sequence listing; English.
 XX
 CC The invention relates to novel genes (ABA11004-ABA21534) and proteins
 CC (ABBI4678-ABBI18001) useful for preventing, treating or ameliorating
 CC medical conditions e.g. by protein or gene therapy. The genes are
 CC isolated from a range of human tissues disclosed in the specification.
 CC The nucleic acids, proteins, antibodies and (anti)agonists are useful in
 CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
 CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
 CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
 CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
 CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
 CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)

CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing
 CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
 CC infectious diseases such as viral, bacterial, fungal and parasitic
 CC infections. Note: The sequence data for this patent did not form part of
 CC the printed specification, but was obtained in electronic format directly
 CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

 PT Protecting patient from effects of radiation treatment or treatment or
 PT condition that triggers apoptosis comprises administering flagellin.
 PT
 XX
 PS Example 3; Fig 3; 67pp; English.
 XX
 CC The invention provides a method of protecting a mammal from the effects
 CC of radiation by administering a composition comprising flagellin. The
 CC composition may be administered in combination with a radioprotectant,
 CC such as an antioxidant selected from amifostine and vitamin B, or a
 CC cytokine such as stem cell factor. The method may also be used to protect
 CC a patient from one or more treatments or conditions that trigger
 CC apoptosis, such as cancer treatment by chemotherapy or radiotherapy, or a
 CC stress resulting from radiation, wounding, poisoning, infection or
 CC temperature shock. Preferably the flagellin is derived from a Salmonella
 CC species. The present sequence is that of a tryptic peptide of a
 CC Salmonella flagellin, isolated in an example from the invention which
 CC showed that flagellin activates nuclear factor-kappa B.

DR

XX Protection of a patient from at least one treatment e.g. cancer treatment
PT that trigger apoptosis involves administering a composition comprising an
PT agent, which induces NF-KB.

XX Example 3; Fig 3; 68pp; English.
PS

XX The present invention relates to a method of protecting a patient from
CC one or more treatments that trigger apoptosis by administering a
CC composition comprising an agent that induces nuclear factor kappa B (NF-
CC KB). The agent may be flagellin or transforming growth factor-beta. The
CC treatment may be cancer treatment such as chemotherapy or radiotherapy.
CC The agent may be administered prior to, together with, or after a
CC treatment for the cancer. The invention also provides methods of using
CC the NF-KB inducer agent to: treat a mammal suffering from a
CC constitutively active NF-KB cancer; treat a mammal suffering from damage
CC to normal tissue attributable to treatment of a cancer or to stress; and
CC to modulate cell aging in a mammal. Also provided is a method of
CC screening for an inducer of NF-KB. The cancer treatment includes
CC treatment for breast, colon, lung, kidney, liver cancer etc. The stress
CC includes wounding, poisoning, infection and temperature shock. The
CC treatment modulates cell aging and avoids side effects. In an example
CC from the invention, the NF-KB activating factor in a Salmonella culture
CC broth was identified as flagellin by mass spectrometry. The present
CC sequence is that of an isolated flagellin tryptic peptide.

XX Screening for apoptosis modulator, involves adding suspected modulator to
PT cell-based apoptosis system, separately adding control to cell-based
PT apoptosis system, and comparing level of apoptosis of suspected modulator
PT and control.
XX

XX Disclosure; Fig 3; 68pp; English.
PS

XX The present invention relates to a method of protecting a patient from
CC treatments that trigger apoptosis by administering an agent that induces
CC nuclear factor-kappaB. The agent may be flagellin or TGFbeta. Claimed is
CC a method of screening (M1) for a modulator of apoptosis (I), by adding a
CC suspected modulator to a cell-based apoptosis system; separately adding a
CC control to a cell-based apoptosis system; and comparing the level of
CC apoptosis in steps (a) and (b). The suspected modulator is derived from a
CC mammalian parasite, such as Salmonella, Mycoplasma and Chlamydia. (M1)
CC preferably involves screening for a modulator of NF-kappaB. (M1)
CC transforming growth factor beta (TGFbeta), or modulator of p53.
CC Cytostatic; Antiemetic; Tranquillizer; Vulnerary; Antimicrobial; Antidote;
CC Vasotropic. Apoptosis modulator; NF-kappa B modulator; TGFbeta; modulator
CC ; p53 pathway modulator. (M1) is useful for screening a modulator of
CC apoptosis, preferably modulator of NF-kappaB, TGFbeta or p53. The
CC modulator is useful for treating cancer, which involves administering (I)
CC to a subject in need of treatment, where (I) enhances apoptosis. The
CC treatment is a cancer treatment such as chemotherapy or radiation
CC therapy. (I) is useful for treating a mammal suffering from damage to
CC normal tissue attributable to treatment of a cancer, modulating cell
CC aging in a mammal, and for protecting a patient from conditions that
CC trigger apoptosis, where the condition is stress, radiation, wounding,
CC poisoning, infection and temperature shock. The present sequence is a
CC peptide from flagellin, peptide #11.

PT New chimeric transcriptional regulator useful for regulating

PT transcription of a selected gene in a cell and for gene therapy

PT applications, comprises DNA-binding domain and a msin3A interaction

PT domain.

XX

PS Example 2; Fig 2A; 25pp; English.

XX

CC The invention relates to a chimeric transcriptional regulator comprising

CC a DNA-binding domain and a msin3A interaction domain (SID) capable of

CC binding msin3A. The SID consists of amino acids 8-20 of the human basic

CC region-helix-loop-helix-leucine zipper (bHLHZip) protein, Mad1. The SID

CC appears as ABU09103). Also included are a fusion comprising a SID capable

CC of binding msin3A, where the SID is linked to a DNA-binding molecule and

CC creating a transcriptional regulator, by synthesizing a msin3A-binding

CC molecule and linking the msin3A-binding molecule to a heterologous DNA-

CC binding molecule. The chimeric regulator and fusion protein are useful

CC for repressing transcription of a selected gene in a cell and in the

CC field of functional genomics as analytical tools to modulate the

CC transcription of any gene being studied in either cell or tissue cultures

CC or in whole living organisms. The chimeric regulator, preferably a

CC chimeric repressor, is useful in gene therapy applications. The present

CC sequence is a SID domain containing peptide derived from a basic region-

CC helix-loop-helix-leucine zipper (bHLHZip) protein, used to determine a

CC minimal SID domain peptide sequence

 PT New interfacial biomaterial having binding agents that binds a non-
 PT biological and biological substrate, useful in cell culture, in the
 PT preparation of biological arrays, and for diagnostic and therapeutic
 PT interface.
 XX
 PS Example 6; SEQ ID NO 114; 150bp; English.
 XX
 CC The present invention describes an interfacial biomaterial (I) comprising
 CC binding agents, each having a first ligand that specifically binds a
 CC target non-biological substrate and a second ligand that specifically
 CC binds a target biological substrate. The binding agents define an
 CC interface between the target non-biological substrate and the target
 CC biological substrate, or a non-binding domain substantially lacks binding
 CC to a target biological substrate. (I) has cyostatic activity, and can be
 CC used as a Tie2 receptor antagonist. The methods and compositions of the
 CC present invention can be used in cell culture of fibroblasts, endothelial
 CC cells, stem cells, embryonic and newborn tissue cells and osteoblasts, in
 CC the preparation of biological arrays, in the enhancement of an
 CC interaction between biological materials, for coating implants for in
 CC vivo use, for coating donor transplant cells or tissues, for diagnostic
 CC and therapeutic interface, and for modulating Tie2 receptors in tumour
 CC angiogenesis. The present sequence is used in the exemplification of the
 CC present invention.

 PT Identifying insulin receptor substrate (IRS) protein kinase inhibitor, by
 PT contacting protein kinase C (PKC)-zeta with IRS peptide having PKC-zeta-

PT Ser-phosphorylation site and putative inhibitor, and measuring
 PT phosphorylation.
 XX
 PS Example 5, SEQ ID NO 15, 50pp; English.
 CC The present invention relates to a method for the identification of
 CC insulin receptor substrate (IRS) protein kinase inhibitors or agonists
 CC which involve contacting protein kinase C (PKC)-zeta with at least one
 CC IRS peptide comprising at least one putative inhibitor and measuring the
 CC the presence of at least one putative inhibitor and measuring the
 CC phosphorylation of the PKC-zeta-Ser-phosphorylation site. The IRS-1
 CC peptides of the invention are useful for producing antibodies against a
 CC PKC-zeta-Ser-phosphorylation site and for preparing a pharmaceutical
 CC composition for the treatment of diabetes type II. The invention also
 CC provides an automated and miniaturized method for screening IRS kinase
 CC protein inhibitors or agonist. The present sequence is rat insulin
 CC receptor substrate (IRS)-1 (449-664) phosphopeptide. This peptide is used
 CC in the identification and functional analysis of IRS-1 serine
 CC phosphorylation sites targeted by PKC.

 XX Self-assembled array for monitoring interaction of molecules, comprising
 PT addressable array of capture agents having predetermined binding partners
 PT and conjugates comprising biological particle and/or molecule linked to
 PT binding partners.
 XX
 XX Disclosure; SEQ ID NO 240; 443pp; English.
 PS
 XX This invention relates to novel self-assembly arrays that each comprises
 CC an addressable collection of capture agents that have predetermined
 CC binding partners, as well as reagents for the covalent conjugation of the
 CC binding partners to molecules for display in the array. Specifically, it
 CC refers to the production of a flexible experimental surface, which can be
 CC adapted for use with almost any analytical system. The present invention
 CC describes apparatus useful for monitoring an interaction of an exogenous
 CC molecule with a capture agent of the array both in the presence and
 CC absence of candidate compounds, identifying molecules that modulate
 CC trafficking in biological particles or modulate activity, functional or
 CC structural properties of the biological particle. As such, it can be used
 CC for elucidating biological pathways and their reactions that occur either
 CC simultaneously or sequentially, disease processes, inhibitors and
 CC enhancers of a molecular system or for understanding receptor-signal
 CC recognition. In particular, it enables assaying one or more biological
 CC samples having one or more targets per sample on a single array, such
 CC that it is cost effective and specific. This peptide sequence is an
 CC exemplary 6-mer peptide epitope that provides a highly specific capture
 CC agent of the invention.

 XX Self-assembled array for monitoring interaction of molecules, comprising
 PT addressable array of capture agents having predetermined binding partners
 PT and conjugates comprising biological particle and/or molecule linked to
 PT binding partners.
 XX
 XX Disclosure; SEQ ID NO 232; 443pp; English.
 PS
 XX This invention relates to novel self-assembly arrays that each comprises
 CC an addressable collection of capture agents that have predetermined
 CC binding partners, as well as reagents for the covalent conjugation of the
 CC binding partners to molecules for display in the array. Specifically, it
 CC refers to the production of a flexible experimental surface, which can be
 CC adapted for use with almost any analytical system. The present invention
 CC describes apparatus useful for monitoring an interaction of an exogenous
 CC molecule with a capture agent of the array both in the presence and
 CC absence of candidate compounds, identifying molecules that modulate
 CC trafficking in biological particles or modulate activity, functional or
 CC structural properties of the biological particle. As such, it can be used
 CC for elucidating biological pathways and their reactions that occur either
 CC simultaneously or sequentially, disease processes, inhibitors and
 CC enhancers of a molecular system or for understanding receptor-signal
 CC recognition. In particular, it enables assaying one or more biological
 CC samples having one or more targets per sample on a single array, such
 CC that it is cost effective and specific. This peptide sequence is an
 CC exemplary 6-mer peptide epitope that provides a highly specific capture
 CC agent of the invention.

 XX
 PT Evenly distributing tags among members of starting library by dividing
 PT starting library into sublibraries, attaching tag to members of
 PT sublibrary, mixing tagged sublibraries and splitting mixed library into
 PT array libraries.
 PS Disclosure; SEQ ID NO 232; 293pp; English.
 XX
 XX The invention relates to evenly distributing tags (e.g. epitopes) or
 CC nucleic acid molecules encoding polypeptide tags among members of a
 CC starting library, involving optionally adjusting the diversity of a
 CC starting library so that the diversity is within an order of magnitude of
 CC the number of molecules in the library, dividing the starting library
 CC into n sublibraries designated 1-n, where n is equal to or less than the
 CC number of unique tags (where each unique tag specifically binds to a
 CC different capture agent), attaching a tag to several members of each
 CC sublibrary to produce n tagged sublibraries containing tagged members
 CC (where each member has the same tag, and the tag is unique to each
 CC sublibrary), mixing some or all of the tagged sublibraries to produce a
 CC mixed library (where the number of tagged molecules added from each
 CC sublibrary is the same), and splitting the mixed library into q array
 CC libraries, where q is from 1 up to a predetermined number of arrays. Also
 CC included are a collection of tagged molecules produced by the method, a
 CC capture system comprising the tagged polypeptides and an addressable
 CC collection of capture agent (where each locus in the collection contains
 CC capture agents that specifically bind to the same tag, and the tagged
 CC molecules are specifically bound to capture agents), capturing molecules
 CC (involving contacting a capture system with molecules under conditions,
 CC where molecules bind to the capture system, and the capture system
 CC comprises several of addressed loci with an addressed collection of
 CC polypeptide-tagged molecules bound to addressed capture agents at each
 CC locus, the capture agents at each locus bind to the same polypeptide tag,
 CC the polypeptide tag to which the capture agent binds is different among
 CC the loci, each locus in capture system contains a several of different
 CC molecules, each with the same tag bound to the capture agents, and the
 CC polypeptide tags are evenly distributed among the tagged molecules such
 CC that the diversity of tagged molecules at each locus in the capture
 CC system is within one order of magnitude), sorting molecules or reducing
 CC their diversity, and reducing the diversity of a collection of molecules.
 CC The starting library encodes antibodies (or their fragments or single-
 CC chain antibody fragments (ScrVs)) or is comprised of antibodies (or their
 CC fragment), where the antibodies or their fragments specifically bind to
 CC antigens. The methods are useful for evenly distributing tags among
 CC members of starting library, for identifying modulators of interactions
 CC between capture systems and molecules (which involves adding/exposing a
 CC test compound to the capture system to a condition before, during or
 CC after contacting the capture system with molecules or before, during or
 CC after contacting the capture agents with the tagged molecules, and
 CC identifying a change in an interaction of the molecules with the capture
 CC system or tagged molecules with the capture agents to identify a test
 CC compound that modulates the interaction between the molecules and the
 CC capture system or between tagged molecules and capture agents. The change
 CC is assessed by detecting a change in binding pattern or a physical or
 CC chemical change in the bound molecules or a conformational change in the
 CC bound molecules and/or tagged molecules). The present sequence is a

CC peptide included in the sequence listing but not mentioned anywhere else
 CC in the specification.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed.
and is derived by analysis of the total score distribution.
